General Information

Product description

The Sumitomo Cyclo Drive is unsurpassed by any other inline drive available in the market today. The Cyclo unique cycloidal design has advantages superior to speed reducers using common involute gears. Cyclo components operate in compression, not in shear. Unlike gear teeth with limited contact points, a Cyclo has 30 % of its reduction components in contact at all times. Cyclo speed reducers and gearmotors provide exceptional performance, reliability and long life in the most severe applications.

Features and Benefits

- Compact size
- Unmatched reliability
- High shock load capacity
- Large range of ratios
- Overall economy
- Ideal for highly dynamic applications
- Low noise
- Exceptional performance, even at high ratios
- Long lifetime
- Energy saving motors
- No thermal factor limitations

Allgemeine Information

Produktbeschreibung

Das Sumitomo Cyclo Drive-Getriebe ist unübertroffen im Vergleich zu herkömmlichen Getrieben. Das einzigartige Zykloidengetriebe hat durch den wälzenden Ablauf einen erheblichen Vorteil gegenüber einem Zahnradgetriebe. Im Gegensatz zu den herkömmlichen Stirnradgetrieben, bei denen ein bis zwei Zähne die gesamte Belastung aufnehmen, wird bei einem Cyclo Getriebe die Last auf mindestens 30 % der Kurvenscheiben verteilt. Cyclo Getriebe und -Getriebemotoren bieten ausgezeichnete Leistung, Zuverlässigkeit und lange Lebensdauer selbst unter härtesten Einsatzbedingungen.

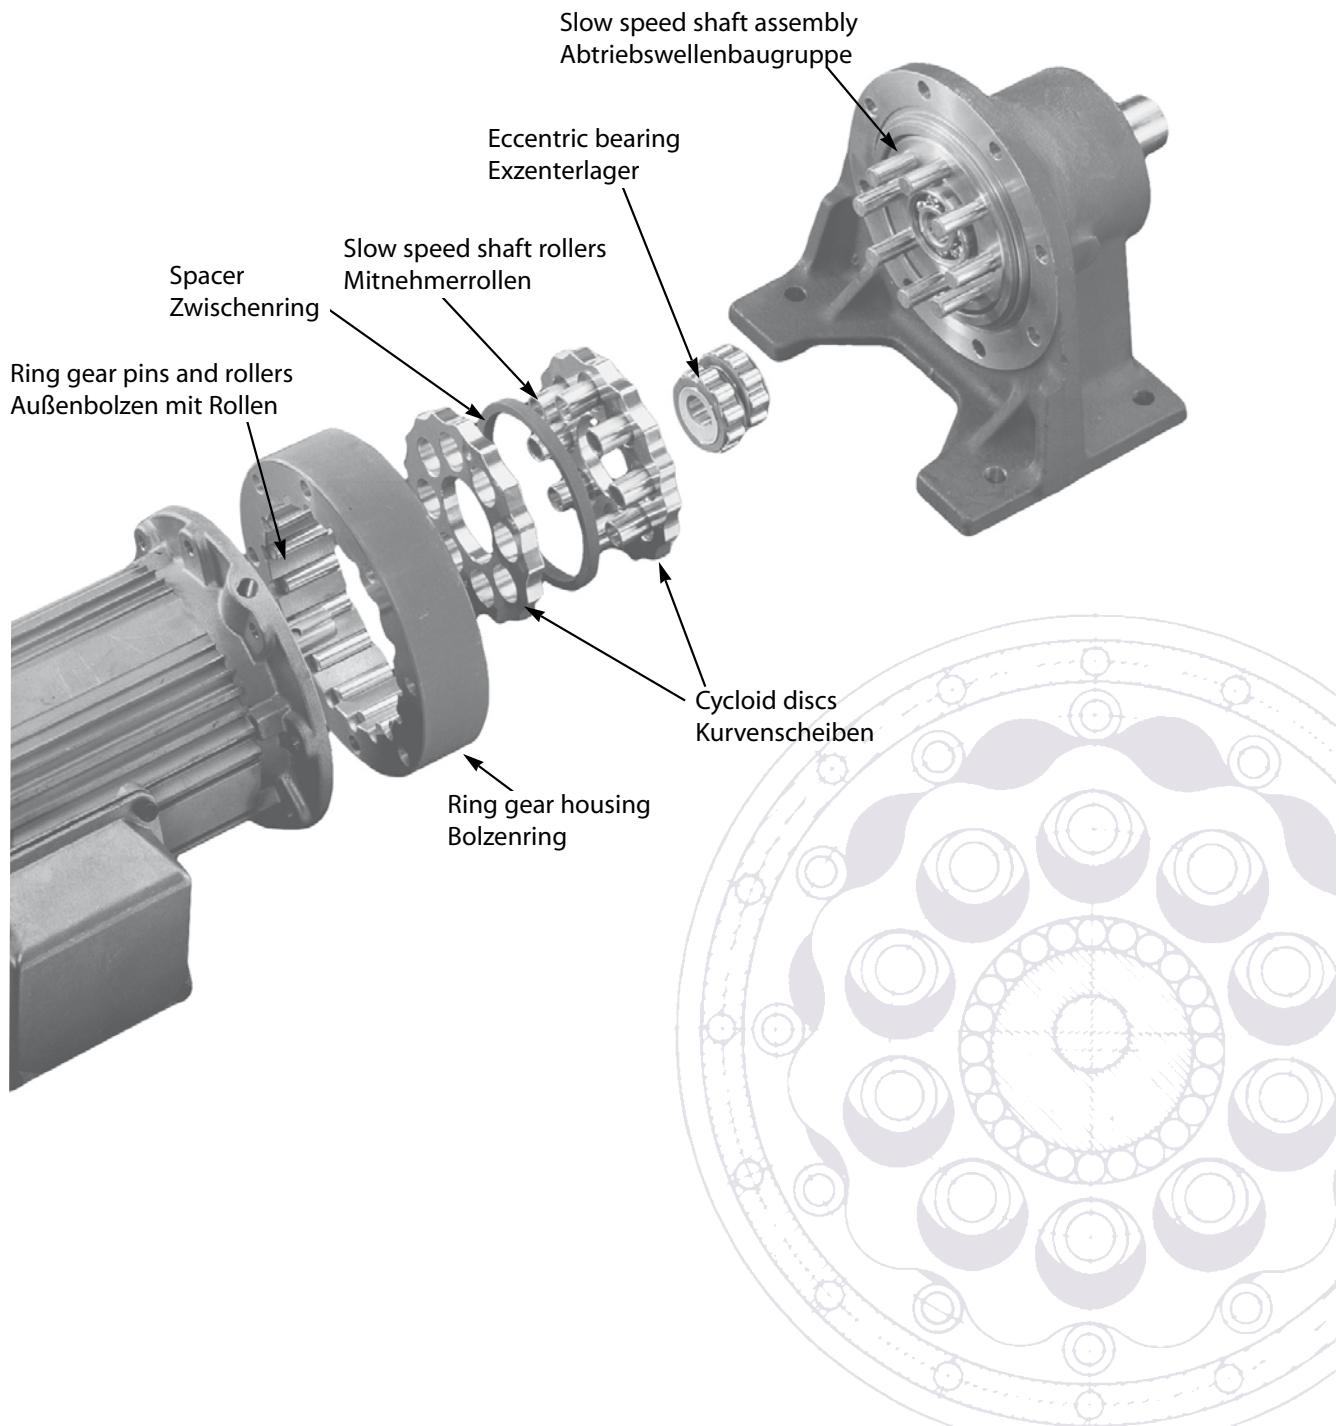

Eigenschaften und Vorteile

- Kompakte Bauform
- Hohe Zuverlässigkeit
- Hohe Überlastreserven
- Großer Übersetzungsbereich
- Wirtschaftlich
- Besondere Eignung für dynamische Applikationen
- Niedriger Geräuschpegel
- Hoher Wirkungsgrad auch bei hoher Übersetzung
- Lange Lebensdauer
- Energiesparende Motoren
- Keine thermische Begrenzung

DRIVE 6000

The Cyclo Principle

Das Cyclo Prinzip

The CYCLO Origins

The name Cyclo derives from Kyklos – the Greek word for circle and refers to the Cyclo disc, whose outer profile describes a cycloidal curve.

The unique CYCLO operating principle was invented by the German engineer Lorenz Braren in 1931 and the ingenious design has continued its progressive development up to the present day.

CYCLO – Der Ursprung

Der Name Cyclo wurde abgeleitet von Kyklos, dem griechischen Wort für Kreis. Cyclo steht heute für Exzentergetriebe, deren Außenprofil einen Zykloiden-Kurvenzug beschreibt.

Das einzigartige Cyclo Prinzip wurde 1931 von dem deutschen Ingenieur Lorenz Braren erfunden. Das geniale Prinzip wird seitdem ständig weiter entwickelt.

The Cyclo Principle ...

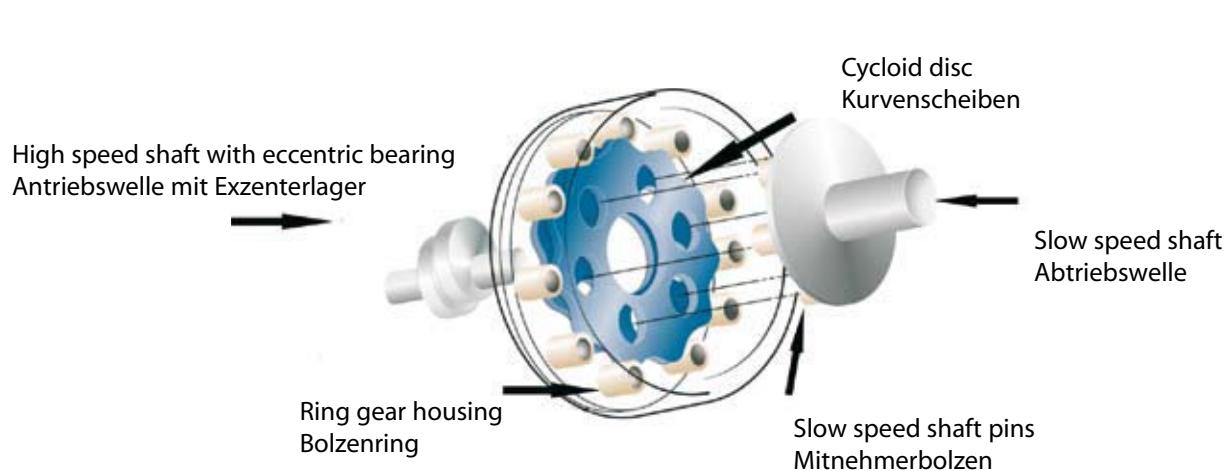

There are essentially four major components in the Cyclo gearbox:

1. High speed shaft with eccentric bearing
2. Cycloid discs
3. Ring gear housing with pins and rollers
4. Slow speed shaft or flange with pins and rollers

Das Cyclo Prinzip ...

Das CYCLO Getriebe setzt sich aus vier Hauptbestandteilen zusammen:

1. der Antriebswelle mit dem Exzenter
2. den Kurvenscheiben
3. dem Bolzenring mit den Bolzen und Rollen
4. der Abtriebswelle mit Bolzen und Rollen

DRIVE 6000

The Cyclo Principle ...

As the eccentric cam rotates, it rolls the cycloid discs around the internal circumference of the stationary ring gear. The resulting action is similar to that of a wheel rolling around the inside of a ring.

As the wheel (cycloid disc) travels in a clockwise path around the ring (ring gear housing), the wheel itself turns slowly on its own axis in a counter-clockwise direction.

In the CYCLO system the cycloidal profile around the outer edge of the disc engages progressively with the rollers of the fixed ring gear housing to produce a reverse rotation at reduced speed. For each complete revolution of the high speed shaft the cycloid disc turns one cycloidal tooth pitch in the opposite direction.

In general, there is one less cycloidal tooth around the disc than there are pins in the fixed ring gear housing, which results in reduction ratios being numerically equal to the number of cycloidal teeth on the disc. (NOTE: On some ratios, there are two less teeth per cycloid disc than there are pins in the ring gear housing.)

The reduced rotation of the cycloid discs is transmitted to the slow speed shaft by means of drive pins and rollers which engage with holes located around the middle of each disc. The rotation of the cycloid discs is transmitted to the slow speed shaft via the pins and rollers projecting through holes in the cycloid discs.

Normally a two disc system is used with a double eccentric cam which increases the torque capacity and offers an exceptionally smooth vibration-free drive.

Das Cyclo Prinzip ...

Wenn sich der Exzenter dreht, wälzt er die Kurvenscheiben entlang des inneren Umfangs des feststehenden Bolzenrings. Die entstehende Bewegung ist ähnlich der einer Scheibe, die sich innerhalb eines Ringes dreht.

Während sich die Kurvenscheiben im Uhrzeigersinn innerhalb des Bolzenrings fortbewegen, drehen sie sich gleichzeitig entgegen dem Uhrzeigersinn um ihre eigene Achse. Dadurch greifen nacheinander Kurvenabschnitte in die Bolzen des Bolzenrings ein und erzeugen so eine umgekehrte Rotation mit verminderter Geschwindigkeit. Jede volle Umdrehung der Antriebswelle bewegt die Kurvenscheibe um einen Kurvenabschnitt weiter.

Das Übersetzungsverhältnis ins Langsame wird durch die Anzahl der Kurvenabschnitte einer Kurvenscheibe bestimmt. Jede Kurvenscheibe hat einen Kurvenabschnitt weniger als Bolzen im Bolzenring sind, wodurch die Übersetzungsverhältnisse jeweils gleich der Anzahl von Kurvenabschnitten der Kurvenscheibe sind. (Bemerkung: bei einigen Übersetzungen sind im Bolzenring zwei Bolzen mehr als Kurvenabschnitte in der Kurvenscheibe.)

Die reduzierte Drehbewegung der Kurvenscheiben wird über Bolzen, die in die Bohrungen der Kurvenscheiben eingreifen, auf die Abtriebswelle übertragen.

Normalerweise wird ein Bausatz mit zwei Kurvenscheiben mit doppeltem Exzenter verwendet, wodurch das Drehmoment erhöht werden kann und trotzdem ein außergewöhnlich ruhiger, vibrationsfreier Lauf gewährleistet wird.

The Cyclo Principle als differential drive

The Cyclo Gear design is suitable as differential drive, the three components input, output and casing can be driven or fixed.

The following equations are valid for the different moving systems:

The reduction ratio can be calculated from the following equation

$$z = - \frac{(n_3 - n_1)}{(n_3 - n_2)}$$

n_1 =speed of the high speed shaft

n_2 =speed of the slow speed shaft

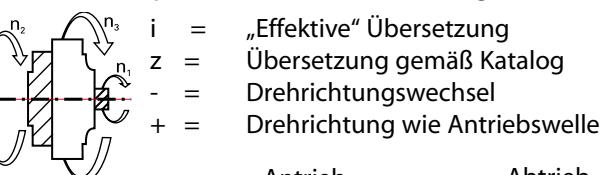

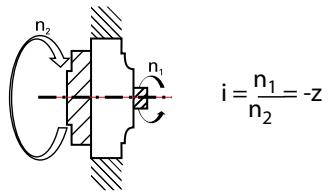

n_3 =speed of the casing (special application
for example in centrifuges)

- i = "Effective" reduction ratio
- z = Reduction ratio acc. to catalogue
- = Change of rotational direction
- + = Rotational direction same as input

Input Output

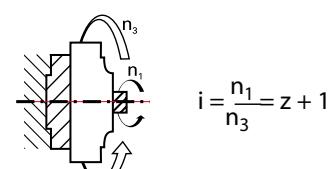

- Input:** Input shaft (n_1)
Output: Output shaft (n_2)
Fixed: Ring gear housing (n_3)

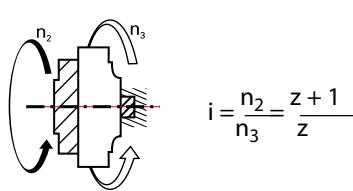

$$i = \frac{n_1}{n_2} = -z$$

- Input:** Input shaft (n_1)
Output: Ring gear housing (n_3)
Fixed: Output shaft (n_2)

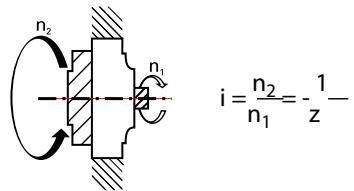

$$i = \frac{n_1}{n_3} = z + 1$$

- Input:** Output shaft (n_2)
Output: Ring gear housing (n_3)
Fixed: Input shaft (n_1)

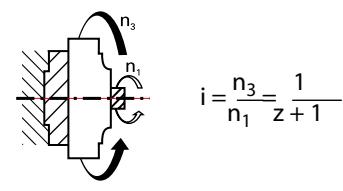

$$i = \frac{n_2}{n_3} = \frac{z+1}{z}$$

- Input:** Output shaft (n_2)
Output: Input shaft (n_1)
Fixed: Ring gear housing (n_3)

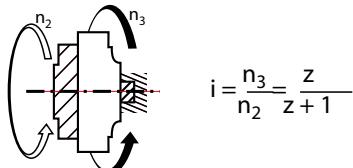

$$i = \frac{n_2}{n_1} = -\frac{1}{z}$$

- Input:** Ring gear housing (n_3)
Output: Input shaft (n_1)
Fixed: Output shaft (n_2)

$$i = \frac{n_3}{n_1} = \frac{1}{z+1}$$

- Input:** Ring gear housing (n_3)
Output: Output shaft (n_2)
Fixed: Input shaft (n_1)

$$i = \frac{n_3}{n_2} = \frac{z}{z+1}$$

Das Cyclo Prinzip als Differentialantrieb

Cyclo Getriebe können aufgrund ihrer Bauart sehr gut als Differentialgetriebe angewendet werden.

Dabei können die drei Baugruppen Antrieb, Abtrieb und Gehäuse angetrieben oder fixiert werden. Für die verschiedenen Bewegungsmodelle gelten die unten stehenden Gleichungen:

Für das Übersetzungsverhältnis gilt die Drehzahlgleichung

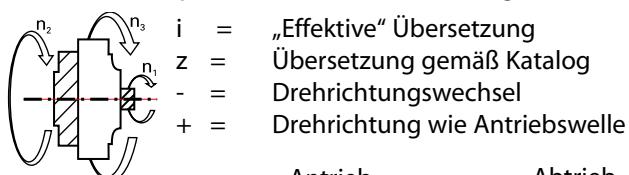

$$z = - \frac{(n_3 - n_1)}{(n_3 - n_2)}$$

n_1 =Drehzahl der Antriebswelle

n_2 =Drehzahl der Abtriebswelle

n_3 =Drehzahl des Gehäuses

(für spezielle Einsätze, z.B. Zentrifugen)

DRIVE 6000

Features and Benefits

- **Extreme Shock Overload Capacity**

Since the CYCLO system distributes the load to numerous cycloid teeth, it can withstand extreme momentary intermittent shock overloads in emergency situations.

Here's why:

At least 30 % of the CYCLO's unique disc profiles share the shock overload and the components are in compression – so can't be sheared off.

- **Compact Size**

Reduction ratios from 3:1 to 119:1 are available for single stage units and for example, triple stages units offer ratios up to almost 1,000,000:1.

- **Overall Economy**

Competitive initial cost, high reliability, long life and minimum of maintenance give CYCLO gearmotor superior overall economy when compared to conventional gearboxes.

- **Capacity for Frequent Start- Stop and Severe Reversing**

The inertia the CYCLO speed reducer is reduced to a minimum, so that it responds quickly in these applications. The shear-free cycloidal profile makes the unit ideal for those applications that quickly wear out competitor's reducers.

- **Low Noise**

When compared with the sliding tooth contact of conventional helical gears, the CYCLO system provides reduced noise level.

- **Energy Saving Motors**

Sumitomo's 4 pole motor range 1.1kW to 55kW are IE1 classified. IE2 motors are available on special request.

- **High Efficiency even at High Ratios**

Torque transmitting parts have a rolling action with minimal friction, so the overall efficiency is as high as 95 % in single stage units.

- **No Thermal Factor Limitations**

CYCLO gearmotors and speed reducers smooth, almost frictionless operation all but eliminates the conventional limitations due to heat. In all sizes and combinations, the drive has a thermal rating that exceeds mechanical capacities.

- **Exceptional Life**

Tests on CYCLO units show negligible wear after 50,000 hours, and experience shows that future wear and tear is insignificant.

Eigenschaften und Vorteile

- **Extreme Schocküberlastbarkeit**

Da sich die Last stets auf mehrere der robusten Kurvenabschnitte verteilt, lässt ein CYCLO Getriebe in Notsituationen kurzzeitig extreme Schocküberlastungen zu.

Wie das funktioniert?

Mindestens 30 % der Kurvenabschnitte einer Kurvenscheibe des einzigartigen CYCLO Getriebesystems nehmen die Schockbelastungen auf. Die Kurvenabschnitte sind nur Druckbelastungen ausgesetzt – daher ist ein Abscheren nicht möglich.

- **Kompakte Bauform**

Übersetzungsverhältnisse von 3:1 bis 119:1 sind für einstufige Getriebe lieferbar. Bei dreistufigen Getrieben sind z. B. Übersetzungen von bis zu 1.000.000:1 lieferbar.

- **Wirtschaftlichkeit**

Mit Anschaffungskosten in gutem Preisverhältnis, hoher Rentabilität, langer Lebensdauer und minimaler Wartung sind CYCLO Getriebe im Vergleich zu herkömmlichen Getrieben sehr wirtschaftlich.

- **Besondere Eignung für dynamische Applikationen**

Durch das geringe Trägheitsmoment sind CYCLO Getriebe besonders gut geeignet für häufigen Start-Stop-Betrieb und Drehrichtungswechsel sowie für den Betrieb mit Frequenzumrichter.

- **Niedriger Geräuschpegel**

Während bei Zahnflanken Gleitreibung entsteht, wälzen die kraftübertragenden Teile beim CYCLO Getriebe aneinander ab, das Laufgeräusch wird reduziert.

- **Energiesparende Motoren**

Vierpolige Sumitomo-Motoren mit einer Leistung von 1,1 bis 55 kW sind nach IE1 klassifiziert. IE2 Motoren sind auf Anfrage erhältlich.

- **Hoher Wirkungsgrad auch bei hohen Übersetzungen**

Die Übertragung des Drehmoments erfolgt mit einer minimalen Reibung, deshalb beträgt der Gesamtwirkungsgrad bei einem einstufigen Getriebe 95 %.

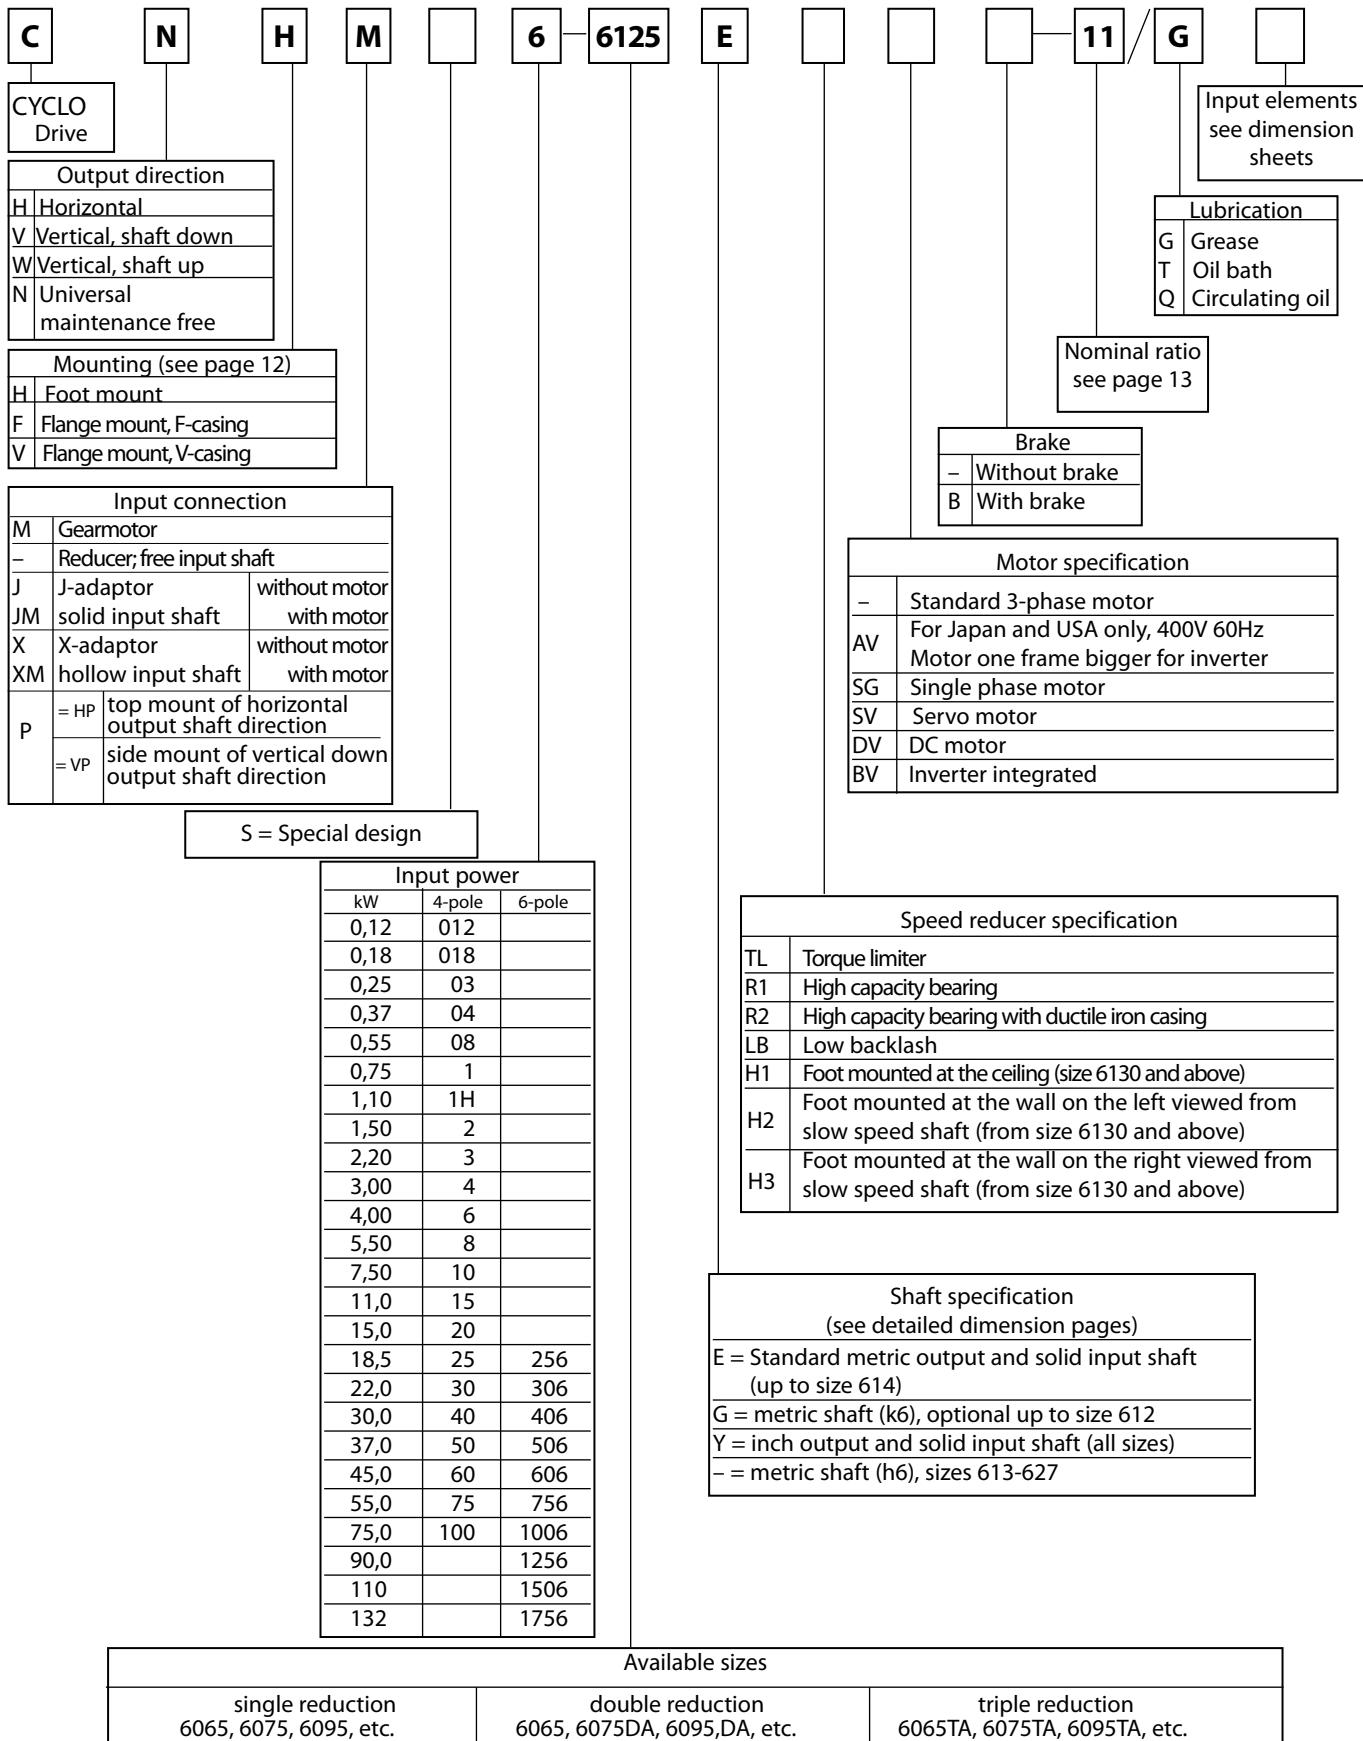

- **Keine thermische Begrenzung**

CYCLO Getriebe und -Getriebemotoren sind durch geringe Reibung nicht den herkömmlichen Grenzen durch thermische Belastung ausgesetzt. In allen Größen und Bausystemen ist die thermische Begrenzung größer als die mechanische Kapazität.

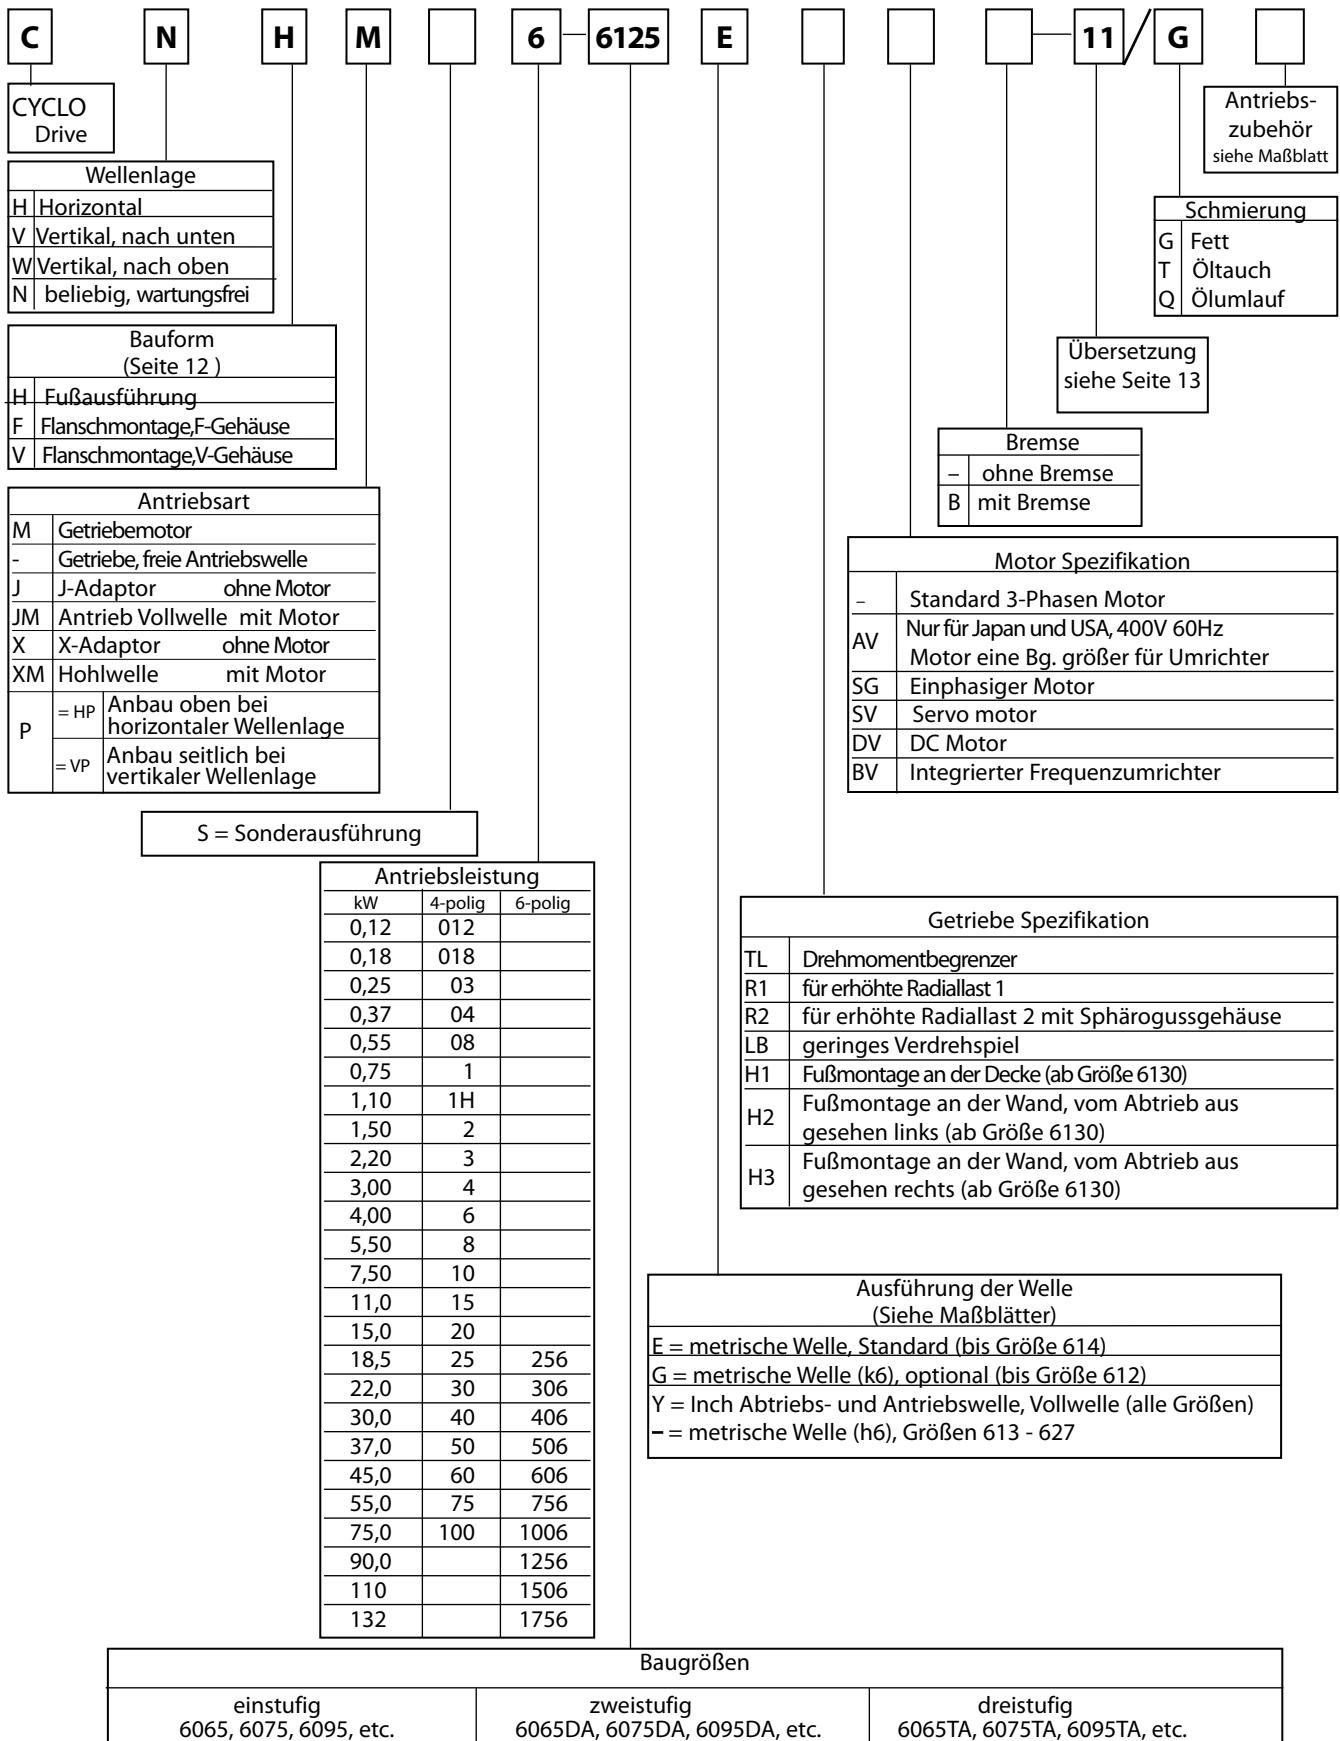

- **Außergewöhnliche Lebensdauer**

Die bei CYCLO Getriebeeinheiten durchgeführten Tests zeigten nach 50.000 Betriebsstunden keinen nennenswerten Verschleiß. In der Praxis hat sich herausgestellt, dass Verschleißerscheinungen auch nach längerem Betrieb unbedeutend sind.

DRIVE 6000

Gear motor selection

1. Select correct service factor

The ratings shown in the selection tables are based on a running time of 10 hours per day with uniform load, including up to 10 starts or stops per hour, at which the momentary peak torque is up to 200 % of the rated torque.

If actual working conditions are different, then an equivalent service factor f_{B1} must be selected from table for load classification by application or ratio of inertia together with table for service factor.

Then the speed reducer is selected as follows :

Find the required power P_1 or torque $M_{2\text{mot}}$

Find the correct output speed n_2

Choose the speed reducer size with a service factor greater than the f_{B1} recommended

f_{B1} = required service factor [-]

f_B = actual service factor [-]

P_1 = allowable input power [kW]

M_2 = allowable output torque [Nm]

n_2 = output speed [min^{-1}]

Getriebemotor-Auswahl

1. Wählen Sie den richtigen Betriebsfaktor

Die Daten in den Auswahllisten für Getriebemotoren beziehen sich auf eine tägliche Betriebsdauer von 10 Stunden bei stoßfreiem Betrieb, einschließlich 10 Anlauf- bzw. Bremsvorgängen pro Stunde, wobei die Spitzenbelastung 200 % des Nennwertes nicht überschreiten darf.

Liegen andere Einsatzbedingungen vor, so wird zuerst ein entsprechender Betriebsfaktor f_{B1} mit Hilfe der Tabelle und der Belastungskennwerte bestimmt.

Der Getriebemotor wird dann wie folgt ausgewählt:

Auswahl der benötigten Leistung P_1 oder des benötigten Drehmomentes $M_{2\text{mot}}$

Auswahl der gewünschten Abtriebsdrehzahl n_2

Festlegung der Größe des Getriebemotors unter Berücksichtigung des benötigten Betriebsfaktors f_{B1}

f_{B1} = benötigter Betriebsfaktor [-]

f_B = Betriebsfaktor [-]

P_1 = Nennantriebsleistung [kW]

$M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf den Antriebsmotor bezogen

n_2 = Abtriebsdrehzahl des Getriebemotors [min^{-1}]

In addition to the above, the following items must also be checked:

- a) Include stops in number of starts/stops, if the stops are managed by a brake.
- b) Check allowable thermal motor capacity
- c) Please consult Sumitomo Drive Technologies, if the machine starts under pre-load with torque or overhung load

Zusätzlich zu obengenannten Vorschriften müssen die folgenden Punkte geprüft werden:

- a) Anzahl der Stoppvorgänge aus der Gesamtanzahl der Start- und Stoppvorgänge, wenn die Stoppvorgänge mittels der Bremse getätigten werden.
- b) Kontrollieren Sie die zulässige Erwärmungskapazität des Motors
- c) Kontaktieren Sie bitte Sumitomo Drive Technologies, wenn die Maschine mit Drehmoment oder Radialkraftvorbelastung startet

| | 3 hours per day 3 Stunden pro Tag | | | 10 hours per day 10 Stunden pro Tag | | | 24 hours per day 24 Stunden pro Tag | | |
|------------------|--------------------------------------|-----------------|---------------|--|-----------------|---------------|--|-----------------|---------------|
| | I | II | III | I | II | III | I | II | III |
| load condition/h | uniform load | moderate shocks | heavy shocks | uniform load | moderate shocks | heavy shocks | uniform load | moderate shocks | heavy shocks |
| Anläufe/h | gleichförmiger Betrieb | mäßige Stöße | schwere Stöße | gleichförmiger Betrieb | mäßige Stöße | schwere Stöße | gleichförmiger Betrieb | mäßige Stöße | schwere Stöße |
| < 10 | 0,80 | 1,00 | 1,20 | 1,00 | 1,10 | 1,35 | 1,20 | 1,35 | 1,50 |
| < 200 | 0,85 | 1,10 | 1,30 | 1,10 | 1,30 | 1,50 | 1,25 | 1,50 | 1,65 |
| < 500 | 0,9 | 1,2 | 1,4 | 1,15 | 1,45 | 1,6 | 1,3 | 1,6 | 1,75 |

2. Consideration of the ratio of inertia

$$\text{ratio of inertia} = \frac{\text{all external inertias}}{\text{inertia on motor side}}$$

'All external inertias' is the sum of the individual inertias of each driven component (including the gearbox), related to the motor speed.

Inertia on the motor side is the inertia of the motor and, if existing, the brake and the high inertia fan.

- | | |
|-------------------|---------------------------------------|
| I uniform load | allowable ratio of inertia $\leq 0,3$ |
| II moderate shock | allowable ratio of inertia ≤ 3 |
| III heavy shock | allowable ratio of inertia ≤ 10 |

2. Berücksichtigung des Trägheitsverhältnisses

$$\text{Trägheitsverhältnis} = \frac{\text{Alle externen Trägheitsmomente}}{\text{Motorseitiges Trägheitsmoment}}$$

Das externe Trägheitsmoment ist ein auf die Motordrehzahl reduziertes Trägheitsmoment von angetriebener Maschine und Getriebe.

Das motorseitige Trägheitsmoment ist das Trägheitsmoment des Motors und, wenn vorhanden, der Bremse und des Lüfters.

- | | |
|--------------------------|-------------------------------------|
| I gleichförmiger Betrieb | zul. Trägheitsverhältnis $\leq 0,3$ |
| II mäßige Stöße | zul. Trägheitsverhältnis ≤ 3 |
| III schwere Stöße | zul. Trägheitsverhältnis ≤ 10 |

3. Check thermal capacity of motor**3. Erwärmungskapazität des Motors prüfen**

4.1) Calculate value C-Wert from following Formula:

$$C = \frac{\text{inertia of motor} + \text{total inertia except motor}}{\text{inertia of motor}}$$

4.2) Calculate number of starts per hour Z

a) Assume that one operating period consists of "on-time" t_a [sec], "off-time" t_b [sec] and the motor is started n_r times per cycle.

$$Z_r = \frac{3600 \times n_r}{t_a + t_b}$$

b) When inching, n_i [times cycle] is included in 1 cycle ($t_a + t_b$) the number of inching times per hour Z_i is then included in the number of starts

$$Z_i = \frac{3600 \times n_i}{t_a + t_b}$$

c) Calculate total number of Starts Z [time/cycle] from a) and b)

$$Z = Z_r + 1/2 \times Z_i$$

4.3) Check C x Z from 4.1 and 4.2 against the allowable value in table above.**4.4) Percentage of operation time % ED**

$$\% \text{ ED} = \frac{t_a}{t_a + t_b} \times 100$$

4.1) Berechnen Sie den C-Wert nach folgender Formel:

$$C = \frac{\text{Trägheitsmoment des Motors} + \text{Gesamtträgheitsmoment ohne Motor}}{\text{Trägheitsmoment des Motors}}$$

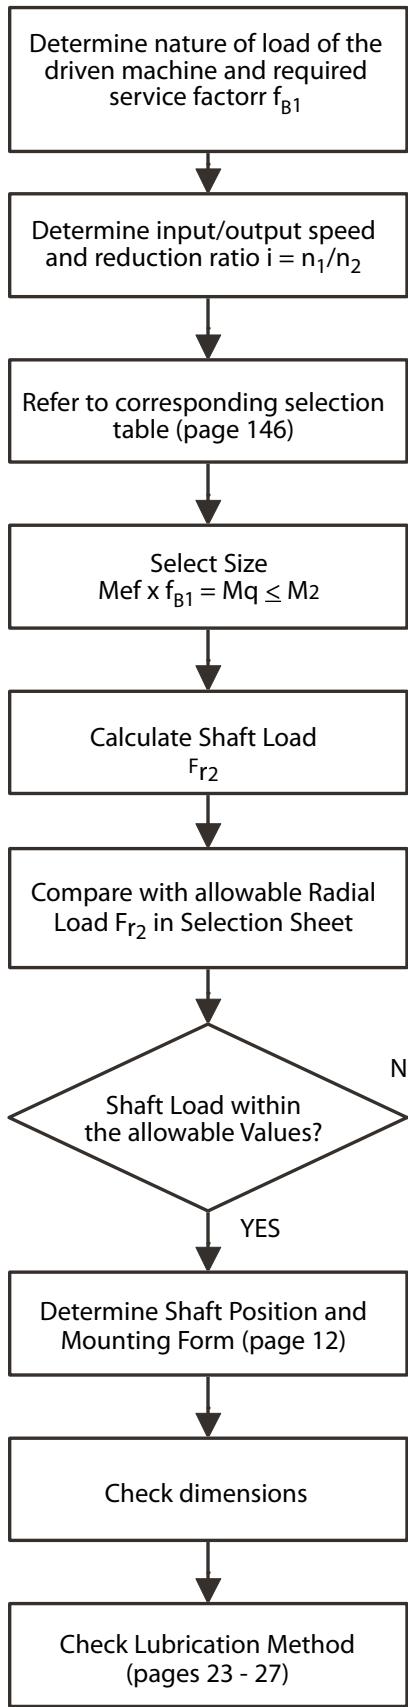

4.2) Berechnen Sie die Anzahl der Startvorgänge pro Stunde Z

a) Wenn n_r die Anzahl der Startvorgänge pro Arbeitszyklus bei Betriebsdauer t_a [s] und Pausenzeit t_b [s] ist.

b) Bei Tippschaltung ist n_i Anzahl der Startvorgänge pro Zyklus ($t_a + t_b$). Die Anzahl der Tippschaltungen pro Stunde Z_i ist in der Anzahl der Startvorgänge berücksichtigt.

c) Berechnen Sie die Gesamtanzahl der Startvorgänge Z [Zeit/Zyklus] aus a) und b)

4.3) Prüfen Sie C x Z aus 4.1 und 4.2 anhand des zulässigen Wertes in der obigen Tabelle.**4.4) Anteil der Betriebsdauer % ED**

EXAMPLE OF SELECTION

Effektive Torque

$$M_{ef} = 95 \text{ Nm}$$

Driven Machine:

Chain conveyor

Nature of Load: II (moderate shocks)

Daily Duty: 24 hours / day

Service factor f_{B1} : 1,25Input Speed n_1 :

$$1450 \text{ min}^{-1}$$

Reduction Ratio i

$$35$$

Output speed n_2 :

$$41,4 \text{ min}^{-1}$$

Refer to selection table $n_1 = 1450 \text{ min}^{-1}$ (page 146)

$$M_q = 95 \text{ Nm} \times 1,25 = 118,7 \text{ Nm}$$

Selected Speed Reducer Size: 6090

$$M_2 = 134 \text{ Nm} \geq M_q = 118,7 \text{ Nm}$$

Connection with Driven Machine:

Chain, $C_f = 1$ Pitch Circle Diameter d_o of the sprocket: 70 mmLoad Position: Mid Slow Speed Shaft, $L_f = 1$

Check radial load on slow speed shaft:

$$F_{Rq} = \frac{2 \times 10^3 \times M_{ef} \times f_{B1} \times L_f \times C_f}{d_o} = [\text{N}]$$

$$F_{Rq} = \frac{2 \times 10^3 \times 95 \times 1,25 \times 1 \times 1}{70} = 3393 \text{ N}$$

Speed reducer size 6100 is correct

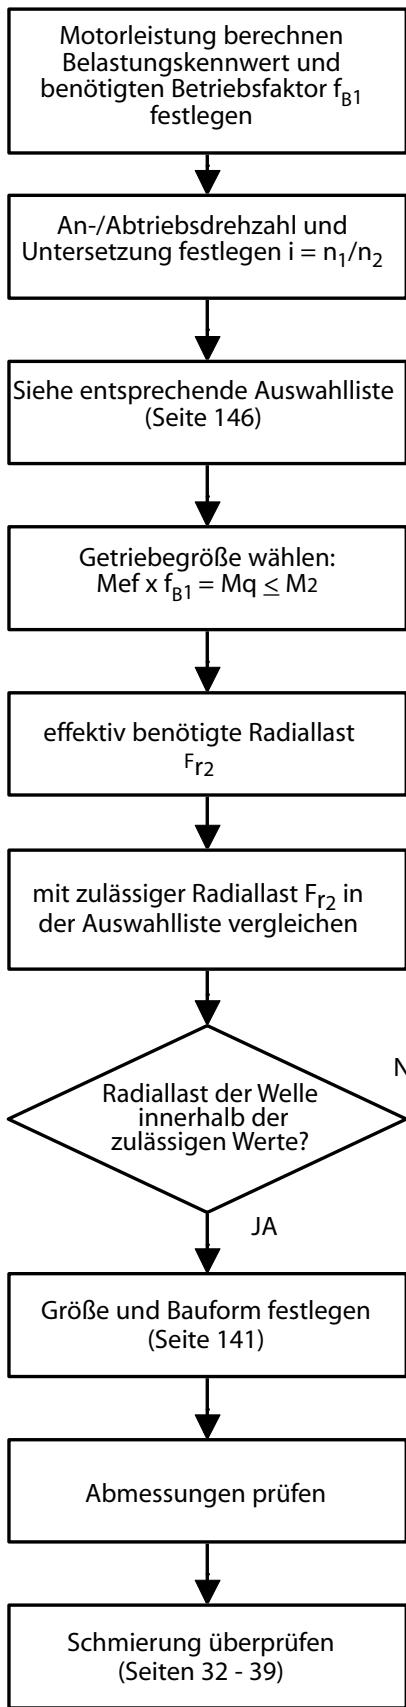

$$F_{R2} = 4970 \text{ N} > F_{Rq} = 3664 \text{ N}$$

Shaft Position Horizontal/Universal (depending on size)

Mounting Foot mount

Type designation CNH 6100E-35/G

Lubrication Method Grease lubrication for life

AUSWAHLBEISPIEL
Effektives Drehmoment $M_{ef} = 95 \text{ Nm}$

Angetriebene Maschine: Kettenförderer
Belastungskennwert: II (mäßige Stöße)
Betriebsdauer: 24 Stunden pro Tag
Betriebsfaktor $f_{B1}: 1,25$

Antriebsdrehzahl $n_1: 1450 \text{ min}^{-1}$
Übersetzung $i: 35$
Abtriebsdrehzahl $n_2: 41,4 \text{ min}^{-1}$

siehe Auswahlliste $n_1 = 1450 \text{ min}^{-1}$ (Seite 146)

$$M_q = 95 \text{ Nm} \times 1,25 = 118,7 \text{ Nm}$$

gewählte Getriebegröße: 6100
 $M_2 = 134 \text{ Nm} \geq M_q = 118,7 \text{ Nm}$

Verbindung mit der anzutreibenden Maschine:
Kette, $C_f = 1$
Durchmesser des Kettenrades : 70 mm
Lastangriffspunkt: Mitte Abtriebswelle $L_f = 1$

Kontrolle der Radiallast an der Abtriebswelle:

$$F_{Rq} = \frac{2 \times 10^3 \times M_{ef} \times f_{B1} \times L_f \times C_f}{d_o} = [\text{N}]$$

$$F_{Rq} = \frac{2 \times 10^3 \times 95 \times 1,25 \times 1 \times 1}{70} = 3393 \text{ N}$$

$$F_{R2} = 3340 \text{ N} \leq F_{Rq} = 3394 \text{ N}$$

Getriebemotorgröße 6100 ist richtig

$$F_{R2} = 4970 \text{ N} > F_{Rq} = 3664 \text{ N}$$

Operation

Ambient Temperature

The standard speed reducers are suitable for use in an ambient temperature range of -10°C to $+50^{\circ}\text{C}$. For higher or lower ambient temperatures please contact Sumitomo Drive Technologies.

If the ambient temperature is higher than 50°C , a special high temperature design is necessary. Please contact Sumitomo Drive Technologies.

Shaft Connections

Pulley, sprocket or pinions should be mounted as close to the shaft bearing as possible and ideally not with the effective point of radial load beyond the midpoint of the protruding shaft to avoid undue bearing load and shaft deflection. Never over tighten belts or chains. Careful and accurate installation is essential for best results and trouble-free operation. During installation the shafts should be checked to make sure that they are parallel and level. Accuracy of alignment after mounting can be checked with a string or straight edge held against the faces of the sprocket or pulley hubs.

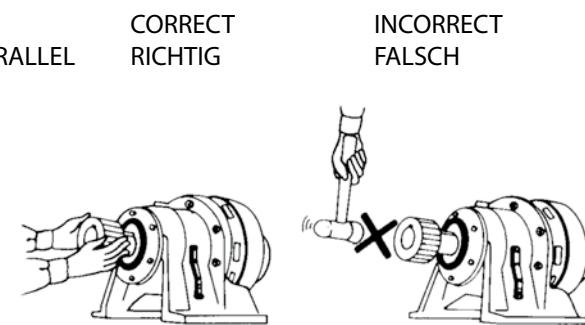

Couplings should be properly aligned to the limits specified by the manufacturer and carefully checked prior to initial start up. The coupling bore diameter and tolerance should be appropriate to the gearbox shaft diameter and tolerance to give the required fit.

Inbetriebnahme

Umgebungstemperatur

Die Standardgetriebe sind für den Betrieb bei Umgebungstemperaturen von -10°C bis $+50^{\circ}\text{C}$ geeignet.

Für den Einsatz bei höherer oder niedrigerer Umgebungstemperatur bitte bei Sumitomo Drive Technologies rückfragen.

Übertragungselemente

Riemenscheiben, Kettenräder, Ritzel oder ähnliches sind stets so auf die Welle zu montieren, dass der Abstand zum Getriebegehäuse möglichst gering ist und möglichst innerhalb des Bereichs bis Mitte-Wellenstumpf liegt, um unnötige Lagerbelastung und Biegekräfte zu vermeiden. Riemen oder Ketten dürfen nicht zu fest gespannt sein. Die Montage der Antriebselemente sollte äußerst sorgfältig erfolgen, um einen störungsfreien Betrieb sicherzustellen.

Die Wellen und die Übertragungselemente dürfen beim Aufsetzen nicht verkantet, sondern müssen exakt ausgerichtet werden. Nach der Montage kann die exakte Ausrichtung mit einem Abrichtlineal überprüft werden, das an die Übertragungselemente gehalten wird.

Kupplungen sind entsprechend den Angaben des Herstellers einzustellen und vor Einschalten des Getriebes muss die exakte Einstellung der Kupplung noch einmal überprüft werden. Der Bohrungsdurchmesser der Kupplung sowie die Toleranz müssen dem Wellendurchmesser und der Toleranz der Welle des Getriebes entsprechen, um die richtige Passung zu gewährleisten.

Operation

Control of shaft load

When power is transmitted through spur gears, belts, pulleys or chains radial forces are applied to the shafts. The radial load capacities are calculated from load centering and compared with the allowable radial load.

Installation

Be sure to install and operate CYCLO DRIVE gearmotor and speed reducers in compliance with applicable local and national safety codes. Appropriate guarding for rotating shafts should always be fitted.

Mounting Considerations

Horizontal and vertical oil-lubricated units should be mounted in exact planes whenever possible. When they are mounted on inclined surfaces, minor modifications are necessary, since an inclined mounting could lower the oil level. However, over-filling the unit with oil may cause leakage through the air vent, foaming and churning and consequently overheating. Please contact Sumitomo Drive Technologies.

Inbetriebnahme

Wellenlast überprüfen

Erfolgt die Kraftübertragung über Riemen, Kette oder Ritzel, dann tritt an den Wellenenden eine Radialbelastung auf. Die Wellenbelastungen werden unter Berücksichtigung des Lastangriffspunktes berechnet und mit der zulässigen Belastung verglichen.

Einbau

Beim Einbau und Betrieb von CYCLO Drive-Getriebemotoren und -Getrieben sind alle einschlägigen Sicherheitsbestimmungen zu beachten. Für rotierende Wellen müssen entsprechende Sicherheitsabdeckungen vorgesehen werden.

Hinweise für die Aufstellung

Ölgeschmierte DRIVE für horizontale und vertikale Einbaulage sind auf einem ebenen und starren Fundament aufzustellen. Geneigte Einbauflächen können unter Umständen eine Korrektur der eingefüllten Schmierstoffmengen bzw. andere Anpassungsmaßnahmen erforderlich machen. Eine Überfüllung von ölgeschmierten Getrieben kann zu Leckagen durch den Atmungsfilter, Aufschäumen des Öls und daraus resultierend zu Überhitzung des Getriebes führen. In Zweifelsfällen bitte Rückfrage bei Sumitomo Drive Technologies.

DRIVE 6000

Lubrication

Lubrication System

The smaller CYCLO units up to size 6125 and some multiple reduction units are grease lubricated. All larger units are normally oil lubricated as standard.

Lubrication

Grease Lubrication

All grease lubricated units are filled with grease at the factory and are ready for use.

Lifetime Grease Lubrication

CYCLO Drive gearmotor and speed reducers up to size 6125 single stage and multi stage are grease lubricated for life and suitable for any mounting position. They are supplied filled with ESSO Unirex N2 grease and are maintenance free for 20,000 operating hours or 4 to 5 years.

Other Grease Lubrication

Grease lubricated CYCLO Drive gearmotor and speed reducers up to size 6125 single- and multistage, and above size 6125 with all ratios have to be regreased for the first time after 500 hours of operation, but at least after 2 months. Further regreasing is recommended every 3 - 6 months of operation, but at least every 2 years. These units are provided with grease nipples and vent plugs to allow for periodic regreasing. Grease lubricated units have a tag which specifies the filled in grease. For recharge or renewal the same kind of grease must be used. Mixing of different grease types is not allowed.

Oil-Lubricated Units

All oil-lubricated CYCLO Drive gearmotor and speed reducers are shipped without oil. They require pre-filling with oil prior to operation. Some models need to be supplied with oil in distinct locations. The location of the oil accessories are shown in the operation manual. Please consult Sumitomo Drive Technologies if oil lubricated units are used with grease lubrication, in case of special requirements.

Oil change intervals

Oil levels must be checked every 5,000 hours. If the oil is contaminated, burned or waxed, change the oil immediately, and flush the gear if necessary. Under normal operating conditions oil should be changed every 10,000 hours or after 2 years at the latest. A more regular oil change (every 3000 or 5000 hours) will increase the gear lifetime.

We recommend changing the oil after the first 500 hours of operation.

The recommendations above do not apply to abnormal operating conditions, i.e., high temperature, high humidity or corrosive environments. If any of these situations exist, the lubricant may have to be changed more frequently.

Schmierung

Fettschmierung

Alle fettgeschmierten Getriebe sind werkseitig mit Fett befüllt und werden betriebsbereit geliefert.

Lebensdauer-Fettschmierung

CYCLO Drive-Getriebemotoren und -Getriebe bis zu Größe 6125 einstufig und mehrstufig sind lebensdauerfettgeschmiert und für jede Einbaulage geeignet. Diese Getriebe werden werkseitig mit Fett ESSO Unirex N2 befüllt und sind wartungsfrei für 20.000 Betriebsstunden oder 4 bis 5 Jahre.

Weitere Fettschmierung

Die fettgeschmierten CYCLO Drive-Getriebemotoren und -Getriebe bis zu Größe 6125 ein- und mehrstufig, sowie größer als 6125 mit allen Übersetzungsverhältnissen sollten nach den ersten 500 Betriebsstunden nachgeschmiert werden, spätestens jedoch nach 2 Monaten. Weitere Nachschmierungen werden alle 3 bis 6 Monate empfohlen, oder spätestens nach 2 Jahren. Diese Getriebeeinheiten sind mit Schmiernippel und Atmungsfilters für periodische Nachschmierung ausgerüstet. Für Nachfüllung oder Fetterneuerung muss stets dasselbe Fett wie bei der Originalbefüllung verwendet werden. Das Mischen verschiedener Fettsorten ist nicht gestattet.

Ölschmierung

Alle ölgeschmierten CYCLO Drive-Getriebemotoren und -Getriebe werden aus Sicherheitsgründen ohne Ölbefüllung geliefert.

Vor Inbetriebnahme ist Erstbefüllung erforderlich. Manche Getriebe erfordern Ölbefüllung an mehreren Stellen. Hinweise zur Ölbefüllung und Ölstandskontrolle finden Sie in den Betriebsanleitungen.

Wenn ölgeschmierte CYCLO Drive-Getriebe mit Fett geschmiert werden sollen, aufgrund besonderer Anforderungen bitte vorher mit Sumitomo Drive Technologies Rücksprache nehmen.

Ölwechselintervalle

Der richtige Ölstand sollte alle 5000 Stunden überprüft werden.

Wenn das Öl verschmutzt, verbrannt oder zähflüssig ist, wechseln Sie das Öl sofort und spülen Sie, falls erforderlich, das Getriebe.

Unter normalen Betriebsbedingungen empfehlen wir einen Ölwechsel alle 10000 Stunden. Die Intervalle sollten nicht länger als 2 Jahre sein. Kürzere Ölwechselintervalle (alle 3000 bis 5000 Stunden) erhöhen die Lebensdauer.

Ein Ölwechsel nach den ersten 500 Stunden ist sehr empfehlenswert. Obige Empfehlungen können unter anderen Betriebsbedingungen wie hohe Temperatur, hohe Feuchtigkeit oder korrosive Umgebung geändert werden.

Wenn eine dieser Situationen vorliegt, müssen häufigere Ölwechsel stattfinden.

Any oil type that meets the requirements as per DIN 51517 part 3 may be used. Make sure that the correct viscosity class as per 51519 is selected depending on actual operating temperature.

Synthetic oil types on Polyglycol-basis can be used also. The compatibility with the seal material must be checked. Please contact Sumitomo Drive Technologies in such cases.

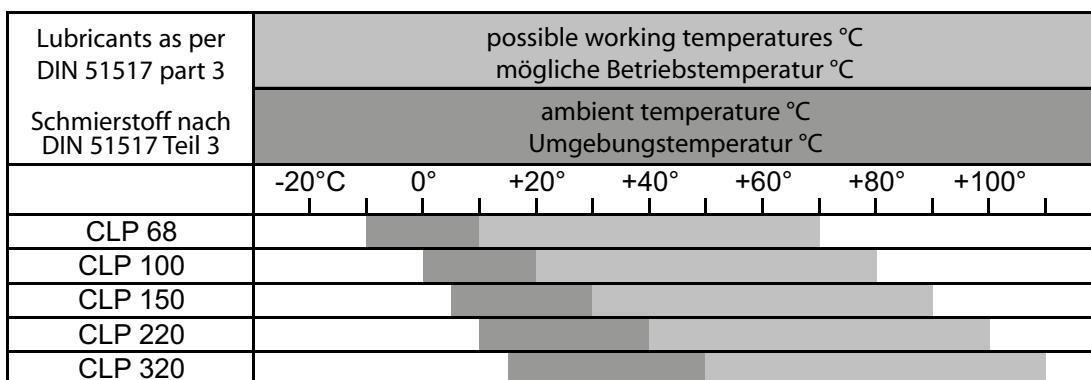

Geeignet sind alle Schmieröle, die die Anforderungen nach DIN 51517 Teil 3 erfüllen.

Je nach Umgebungs- oder Betriebstemperatur muss die richtige Viskositätsklasse nach DIN 51519 gewählt werden.

Synthetische Schmierstoffe auf Polyglykolbasis können auch verwendet werden. Kompatibilität mit Dichtungsmaterial muss jedoch geprüft werden. Für solche Fälle bitte Rückfrage bei Sumitomo Drive Technologies.

DRIVE 6000

Gearmotors Selection Tables

Getriebemotor-Auswahllisten

DRIVE 6000

Gearmotors Selection Table

0,12 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B_1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

| | | |
|-------------------|---|--|
| i | = | reduction ratio |
| n_2 | = | output speed [min^{-1}] |
| $M_{2\text{mot}}$ | = | output torque [Nm] with reference to the driving motor |
| f_B | = | service factor |
| F_{R2} | = | allowable radial load applied to mid of shaft end [N] |

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B_1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

| | | |
|-------------------|---|---|
| i | = | Übersetzung |
| n_2 | = | Antriebsdrehzahl [min^{-1}] |
| $M_{2\text{mot}}$ | = | Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen |
| f_B | = | Betriebsfaktor |
| F_{R2} | = | zulässige Radialkraft auf Mitte Wellenende [N] |

Example / Beispiel: CNHM012-6125E-525/GV63S/4

Gearmotors Selection Table

0,12 kW

Getriebemotor-AuswahlListen

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio

n_2 = output speed [min^{-1}]

$M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor

f_B = service factor

F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den AuswahlListen gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung

n_2 = Antriebsdrehzahl [min^{-1}]

$M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen

f_B = Betriebsfaktor

F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CNHM012-6075E-43/GV63S/4

DRIVE 6000

Gearmotors Selection Table

0,25 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM03-6145DCE-525/GV63M/4

Gearmotors Selection Table

0,37 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B_1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B_1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CNHM04-6095E-35/GV71M/4

Gearmotors Selection Table

0,55 kW

Getriebemotor-AuswahlListen

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CNHM08-6115E-71/GV80S/4

Gearmotors Selection Table

0,75 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CNHM1-6095E-15/GV80M/4

DRIVE 6000

Gearmotors Selection Table

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

1,5 kW

Getriebemotor-Auswahllisten

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM2-6175DC-273/TV90L/4

Gearmotors Selection Table

1,5 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM2-6145E-87/TV90L/4

DRIVE 6000

Gearmotors Selection Table

2,2 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM3-6190DA-319/TV100L/4

DRIVE 6000

Gearmotors Selection Table

3,0 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

| | | |
|-------------------|---|--|
| i | = | reduction ratio |
| n_2 | = | output speed [min^{-1}] |
| $M_{2\text{mot}}$ | = | output torque [Nm] with reference to the driving motor |
| f_B | = | service factor |
| F_{R2} | = | allowable radial load applied to mid of shaft end [N] |

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

| | | |
|-------------------|---|---|
| i | = | Übersetzung |
| n_2 | = | Antriebsdrehzahl [min^{-1}] |
| $M_{2\text{mot}}$ | = | Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen |

Gearmotors Selection Table

3,0 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM4-6145E-43/TV112S/4

Gearmotors Selection Table

4,0 kW

Getriebemotor-AuswahlListen

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio

n_2 = output speed [min^{-1}]

$M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor

f_B = service factor

F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung

n_2 = Antriebsdrehzahl [min^{-1}]

$M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen

f_B = Betriebsfaktor

F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM6-6135E-21/TV112M/4

DRIVE 6000

Gearmotors Selection Table

5,5 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM8-6175-87/TV132S/4

Gearmotors Selection Table

5,5 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio

n_2 = output speed [min^{-1}]

$M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor

f_B = service factor

F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung

n_2 = Antriebsdrehzahl [min^{-1}]

$M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen

f_B = Betriebsfaktor

F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM8-6165-51/TV132S/4

Gearmotors Selection Table

7,5 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM10-6145E-21/TV132M/4

DRIVE 6000

Gearmotors Selection Table

11,0 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM15-6275DA-649/TV160M/4

Gearmotors Selection Table

11,0 kW

Getriebemotor-AuswahlListen

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM15-6175-35/TV160M/4

DRIVE 6000

Gearmotors Selection Table

15,0 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

i = reduction ratio
 n_2 = output speed [min^{-1}]
 $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
 f_B = service factor
 F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

i = Übersetzung
 n_2 = Antriebsdrehzahl [min^{-1}]
 $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
 f_B = Betriebsfaktor
 F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM20-6185-35/TG160L/4

Gearmotors Selection Table

18,5 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM25-6215-59/TF180MG/4

Gearmotors Selection Table

22 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example / Beispiel: CHHM30-6185-13/TF180MG/4

DRIVE 6000

Gearmotors Selection Table

30 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

Example: CHHM40-6215-43/TF180L/4

Gearmotors Selection Table

55 kW

Getriebemotor-Auswahllisten

Rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

The service factors apply to all motor power with a speed of $n_1 = 1400 \text{ min}^{-1}$. The actual speed can (depending on the operating conditions) deviate from the theoretical value given in the table on page 246.

- i = reduction ratio
- n_2 = output speed [min^{-1}]
- $M_{2\text{mot}}$ = output torque [Nm] with reference to the driving motor
- f_B = service factor
- F_{R2} = allowable radial load applied to mid of shaft end [N]

Alle Angaben in den Auswahllisten gelten für einen Betriebsfaktor f_{B1} von 1,0, d.h. für 10 Stunden pro Tag bei gleichförmiger Belastung.

Die Betriebsfaktoren gelten bei allen Motorleistungen für $n_1 = 1400 \text{ min}^{-1}$. Die tatsächliche Drehzahl kann (abhängig von den Betriebsbedingungen) von dem in Tabelle Seite 246 genannten theoretischen Wert abweichen.

- i = Übersetzung
- n_2 = Antriebsdrehzahl [min^{-1}]
- $M_{2\text{mot}}$ = Abtriebsdrehmoment [Nm] auf Antriebsmotor bezogen
- f_B = Betriebsfaktor
- F_{R2} = zulässige Radialkraft auf Mitte Wellenende [N]

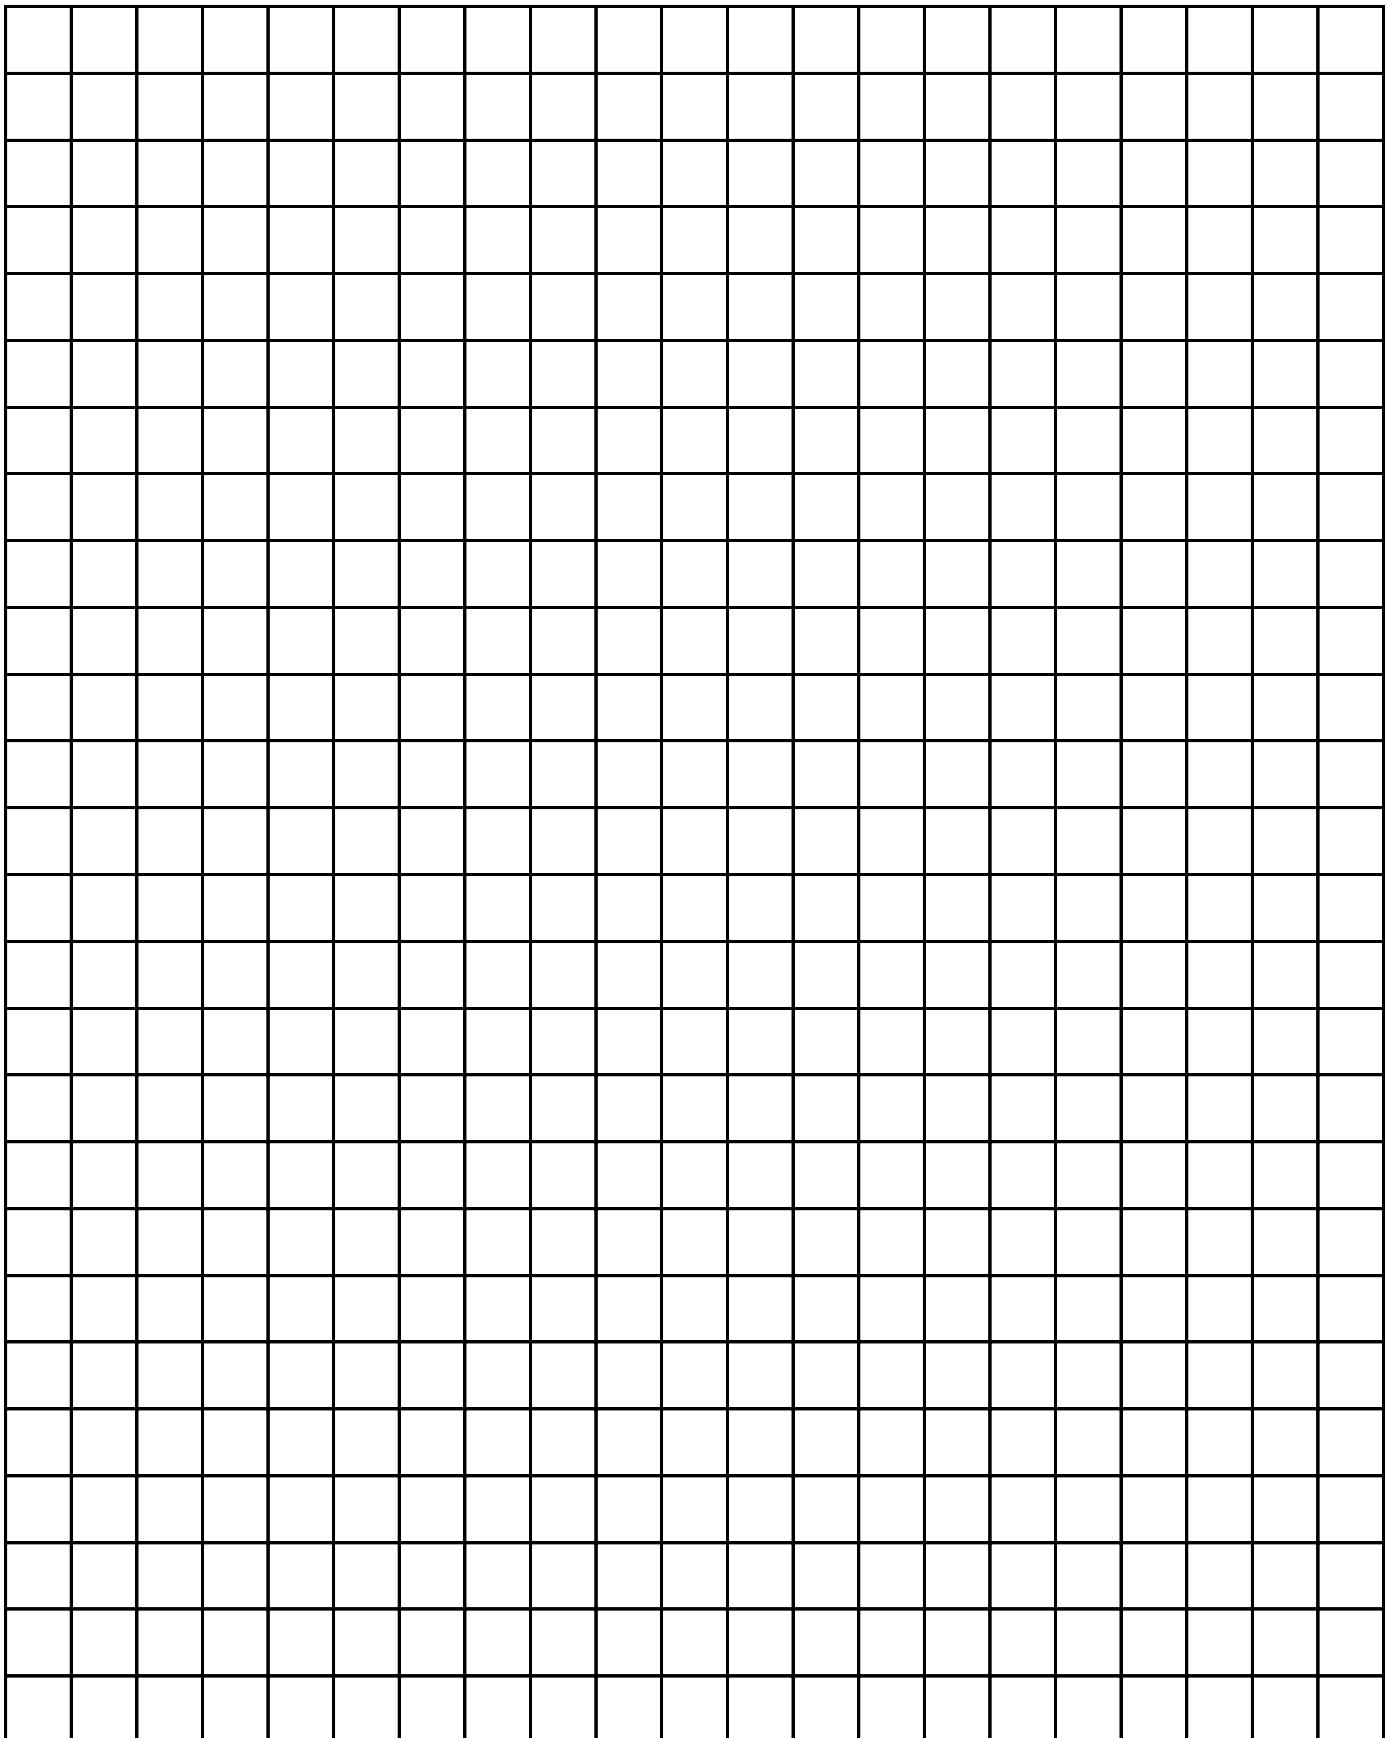

Example / Beispiel: CHHM75-6225-29/TF225S/4

Gearmotors Dimensions

Vertical mounting – 1 stage/Flange mount

Getriebemotor-Maßblätter

Vertikale Einbaulage – 1-stufig/Flanschmontage

* Lubrication fittings may have different positions dependent on frame size.
Die Schmierarmaturen sind, je nach Getriebegröße, an verschiedenen Positionen.
Bei Fettschmierung (untersetzungsabhängig) entfallen die Schmierarmaturen.

** Frame size 6225, 6235 and 6245 may use 2 pumps dependent on ratio.
Bei Größe 6225, 6235 und 6245 sind, je nach Untersetzung, auch 2 Pumpen möglich.

* Lubrication fittings may have different positions dependent on frame size.
Die Schmierarmaturen sind, je nach Getriebegröße, an verschiedenen Positionen.
Bei Fettschmierung (untersetzungsabhängig) entfallen die Schmierarmaturen.

** Frame size 6190/6195 may use 2 pumps dependent on ratio.
Bei Größe 6190DA-6195DB sind, je nach Untersetzung, auch 2 Pumpen möglich.

DRIVE 6000

Speed Reducer Selection

Getriebe-Auswahl

DRIVE 6000

Speed Reducer Selection

Single reduction speed reducers

$i = 3 \text{ to } 119$

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

| | | |
|----------|---|---|
| i | = | reduction ratio |
| n_2 | = | output speed [min^{-1}] |
| P_1 | = | allowable input power [kW] |
| M_2 | = | allowable output power torque [Nm] |
| F_{R2} | = | allowable radial load applied to mid of shaft end [N] |

Getriebe-Auswahl

Einstufige Getriebe

$i = 3 \text{ bis } 119$

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

| | | |
|----------|---|--|
| i | = | Übersetzung |
| n_2 | = | Abtriebsdrehzahl [min^{-1}] |
| P_1 | = | Zulässige Antriebsleistung [kW] |
| M_2 | = | Zulässiges Abtriebsdrehmoment [Nm] |
| F_{R2} | = | Zulässige Radialkraft auf Mitte Wellenende [N] |

$$n_1 = 580 \text{ min}^{-1}$$

Speed Reducer Selection

Single reduction speed reducers

i = 3 to 119The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n₂ = output speed [min⁻¹]P₁ = allowable input power [kW]M₂ = allowable output power torque [Nm]F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 h / Tag bei gleichförmiger Belastung.

i = Übersetzung

n₂ = Abtriebsdrehzahl [min⁻¹]P₁ = Zulässige Antriebsleistung [kW]M₂ = Zulässiges Abtriebsdrehmoment [Nm]F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 580 \text{ min}^{-1}$$

DRIVE 6000

Speed Reducer Selection

Single reduction speed reducers

i = 3 to 119

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min⁻¹]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{B2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n = Abtriebsdrehzahl [min^{-1}]

P_{z} = Zulässige Antriebsleistung [kW]

P_1 = Zulässige Antriebsleistung [kW]

F = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 \equiv 720 \text{ min}^{-1}$$

Ratio 3 and 5 not available for universal mounting.
For vertical mounting please consult Sumitomo Drive Technologies.

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 h/Tag bei gleichförmiger Belastung.

| | | |
|----------|---|--|
| i | = | Übersetzung |
| n_2 | = | Abtriebsdrehzahl [min^{-1}] |
| P_1 | = | Zulässige Antriebsleistung [kW] |
| M_2 | = | Zulässiges Abtriebsdrehmoment [Nm] |
| F_{R2} | = | Zulässige Radialkraft auf Mitte Wellenende [N] |

DRIVE 6000

Speed Reducer Selection

Single reduction speed reducers

i = 3 to 119

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min⁻¹]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{B2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

Ratio 3 and 5 not available for universal mounting.
For vertical mounting please consult Sumitomo Drive Technologies.

Übersetzung 3 und 5 nicht verfügbar bei beliebiger Einbaulage.
Bei Vertikalmontage bitte Rücksprache mit Sumitomo Drive Technologies.

Speed Reducer Selection

Single reduction speed reducers

i = 3 to 119The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load. i = reduction ratio n_2 = output speed [min^{-1}] P_1 = allowable input power [kW] M_2 = allowable output power torque [Nm] F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 h / Tag bei gleichförmiger Belastung. i = Übersetzung n_2 = Abtriebsdrehzahl [min^{-1}] P_1 = Zulässige Antriebsleistung [kW] M_2 = Zulässiges Abtriebsdrehmoment [Nm] F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 980 \text{ min}^{-1}$$

Ratio 3 and 5 not available for universal mounting.
For vertical mounting please consult Sumitomo Drive Technologies.

Übersetzung 3 und 5 nicht verfügbar bei beliebiger Einbaulage.
Bei Vertikalmontage bitte Rücksprache mit Sumitomo Drive Technologies.

DRIVE 6000

Speed Reducer Selection

Single reduction speed reducers

i = 3 to 119

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min^{-1}]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

i = 3 bis 119

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 1450 \text{ min}^{-1}$$

Ratio 3 and 5 not available for universal mounting.
For vertical mounting please consult Sumitomo Drive Technologies.

Übersetzung 3 und 5 nicht verfügbar bei beliebiger Einbaulage.
Bei Vertikalmontage bitte Rücksprache mit Sumitomo Drive Technologies.

DRIVE 6000

Speed Reducer Selection

Single reduction speed reducers

$i = 6 \text{ to } 119$

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min^{-1}]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Einstufige Getriebe

$i = 6 \text{ bis } 119$

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 2900 \text{ min}^{-1}$$

Speed Reducer Selection

Single reduction speed reducers

i = 6 to 119The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

| | |
|----------|---|
| i | = reduction ratio |
| n_2 | = output speed [min^{-1}] |
| P_1 | = allowable input power [kW] |
| M_2 | = allowable output power torque [Nm] |
| F_{R2} | = allowable radial load applied to mid of shaft end [N] |

Getriebe-Auswahl

Einstufige Getriebe

i = 6 bis 119Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 h/Tag bei gleichförmiger Belastung.

| | |
|----------|--|
| i | = Übersetzung |
| n_2 | = Abtriebsdrehzahl [min^{-1}] |
| P_1 | = Zulässige Antriebsleistung [kW] |
| M_2 | = Zulässiges Abtriebsdrehmoment [Nm] |
| F_{R2} | = Zulässige Radialkraft auf Mitte Wellenende [N] |

DRIVE 6000

Speed Reducer Selection

Double reduction speed reducers

$i = 104 \text{ to } 731$

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min^{-1}]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Zweistufige Getriebe

$i = 104 \text{ bis } 731$

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 580\text{min}^{-1}$$

Speed Reducer Selection

Double reduction speed reducers

i = 104 to 731

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min^{-1}]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Zweistufige Getriebe

i = 104 bis 731

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 580 \text{ min}^{-1}$$

DRIVE 6000

Speed Reducer Selection

Double reduction speed reducers

i = 104 to 731

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min⁻¹]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Zweistufige Getriebe

i = 104 bis 731

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

$$n_2 = \text{Abtriebsdrehzahl } [\text{min}^{-1}]$$

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{B2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 720 \text{ min}^{-1}$$

DRIVE 6000

Speed Reducer Selection

Double reduction speed reducers

i = 104 to 731

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min⁻¹]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Zweistufige Getriebe

i = 104 bis 731

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{B2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 980 \text{ min}^{-1}$$

DRIVE 6000

Speed Reducer Selection

Double reduction speed reducers

i = 104 to 731

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min^{-1}]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

$$n_1 = 1450 \text{ min}^{-1}$$

Getriebe-Auswahl

Zweistufige Getriebe

i = 104 bis 731

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

n_2 = Abtriebsdrehzahl [min^{-1}]

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

DRIVE 6000

Speed Reducer Selection

Double reduction speed reducers

i = 104 to 731

The rating tables are based on a service factor f_{B1} of 1.0, i.e. 10 hours per day at uniform load.

i = reduction ratio

n_2 = output speed [min⁻¹]

P_1 = allowable input power [kW]

M_2 = allowable output power torque [Nm]

F_{R2} = allowable radial load applied to mid of shaft end [N]

Getriebe-Auswahl

Zweistufige Getriebe

i = 104 bis 731

Alle Angaben in den Auswahllisten gelten für einen Service Faktor f_{B1} von 1,0, d.h. 10 Stunden pro Tag bei gleichförmiger Belastung.

i = Übersetzung

$$n_2 = \text{Abtriebsdrehzahl } [\text{min}^{-1}]$$

P_1 = Zulässige Antriebsleistung [kW]

M_2 = Zulässiges Abtriebsdrehmoment [Nm]

F_{R2} = Zulässige Radialkraft auf Mitte Wellenende [N]

$$n_1 = 2900 \text{ min}^{-1}$$

Vertical mounting – 1 stage/Flange mount

Getriebe-Maßblätter
Vertikale Einbaulage – 1-stufig/Flanschmontage

- * Lubrication fittings may have different positions dependent on frame size.
Die Schmierarmaturen sind, je nach Getriebegröße, an verschiedenen Positionen.
Bei Fettschmierung (untersetzungsabhängig) entfallen die Schmierarmaturen.
- ** Frame size 6190/6195 may use 2 pumps dependent on ratio.
Bei Größe 6190DA-6195DB sind, je nach Untersetzung, auch 2 Pumpen möglich.

Speed reducer Dimensions

Vertical mounting – 2 stage/Flange mount

* Lubrication fittings may have different positions dependent on frame size.

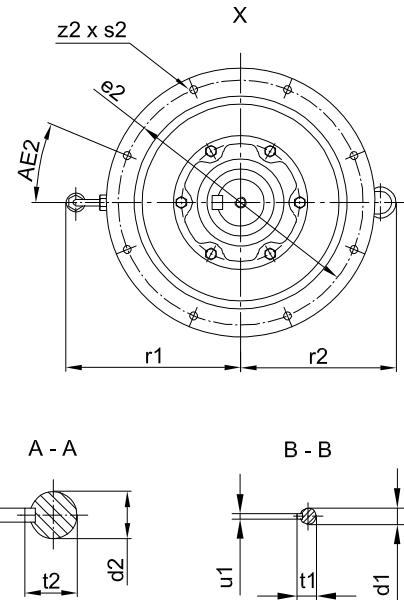

Die Schmierarmaturen sind, je nach Getriebegröße, an verschiedenen Positionen.
Bei Fettschmierung (untersetzungsabhängig) entfallen die Schmierarmaturen.

** Frame size 6190/6195 may use 2 pumps dependent on ratio.

Bei Größe 6190DA-6195DB sind, je nach Unterstellung, auch 2 Pumpen möglich.

DRIVE 6000

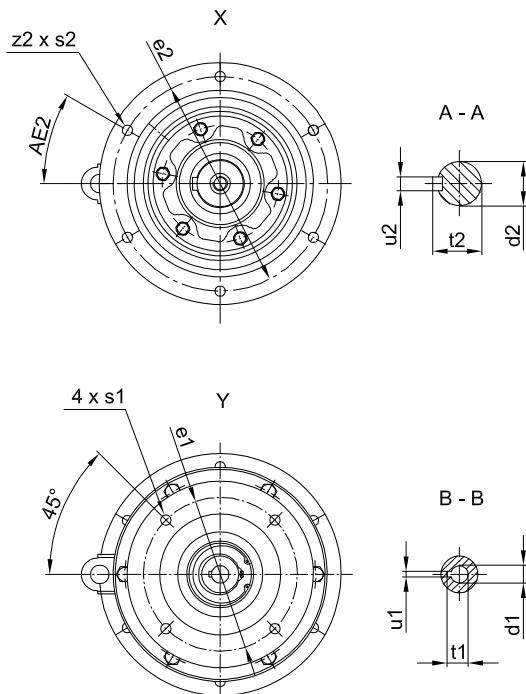

Speed reducer Dimensions
Vertical mounting – 2 stage/Flange mount

Getriebe-Maßblätter
Vertikale Einbaulage – 2-stufig/Flanschmontage

* Lubrication fittings may have different positions dependent on frame size.
Die Schmierarmaturen sind, je nach Getriebegröße, an verschiedenen Positionen.
Bei Fettschmierung (unterstellungsabhängig) entfallen die Schmierarmaturen.

Speed reducer Dimensions

Adjustable Motor Platform

Features

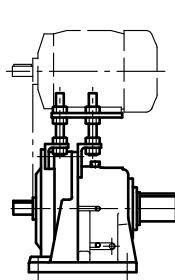

- 1) Fabricated steel motor mount bolts directly to Speed Reducer
- 2) Simple adjusting screws for belt tensioning
- 3) Motor mounts are furnished with pre-drilled holes for ease of motor assembly
- 4) Also available for double stage reducers (for combinations and dimensions ask SDT)
- 5) A vertical shaft position is also possible (CVHP, CWHP)
- 6) Also available as side mount on type V (vertical reducers)
CHH-PL: Motor at the left seen from high speed shaft.
CHH-PR: Motor at the right seen from high speed shaft.

Getriebe-Maßblätter

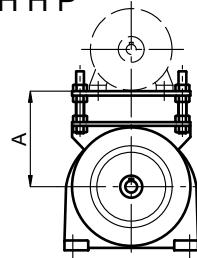

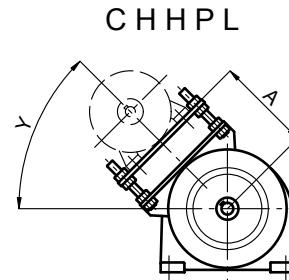

Motortrageplatten

Merkmale

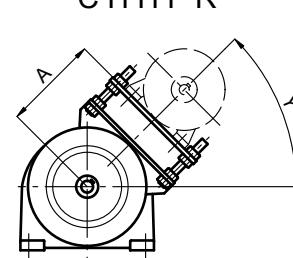

- 1) Motortrageplatten sind direkt am Getriebe befestigt
- 2) Spannen des Riemens durch einfaches Schraubenverstellen
- 3) Motortrageplatten werden mit vorgebohrten Schraublöchern geliefert
- 4) Ausführung auch für zweistufige Getriebe lieferbar (Rückfrage bei SDT für verfügbare Kombinationen und Maße)
- 5) Ausführung auch mit vertikalen Wellen lieferbar (CVHP, CWHP)
- 6) Lieferbar als Seitenmontage an Typ V (Vertikalgetriebe)

Calculations

Berechnungen

DRIVE 6000

Calculations

Slow speed shaft load

Radial load

The applied radial load is calculated as below:

Berechnungen

Abtriebswellenbelastung

Radiale Belastung

Die entstehende Radiallast wird wie folgt berechnet:

$$F_{Rq} = \frac{2 \cdot 10^3 \cdot M_{ef} \cdot f_{B1} \cdot L_f \cdot C_f}{d_o} = [N]$$

$$F_{R2} \geq F_{Rq}$$

F_{Rq} = Equivalent radial load [N] for the selection of a CYCLO Drive

F_{R2} = Allowable radial load [N] at mid slow speed shaft

M_{ef} = Effectively required output torque [Nm]

f_{B1} = Service factor

L_f = Correction factor for load position on slow speed shaft.

d_o = Pitch circle diameter of the drive element [mm]

C_f = Correction factor for type of drive connection

F_{Rq} = Äquivalente Radialbelastung [N] für die Auswahl eines CYCLO Drives

F_{R2} = Zulässige Radialkraft [N] Mitte Abtriebswelle

M_{ef} = Effektiv benötigtes Drehmoment [Nm]

f_{B1} = Betriebsfaktor

L_f = Korrekturfaktor für Lastangriff an der Abtriebswelle

d_o = Teilkreisdurchmesser des Antriebselementes [mm]

C_f = Korrektur für die Antriebsart

Correction factor for type of drive connection C_f

Korrekturfaktor für die Antriebsart C_f

| Type of drive element Antriebselement | C_f |
|--|-------|
| Chain Kette | 1,00 |
| Pinion Ritzel | 1,25 |
| V-belt Keilriemen | 1,50 |

Service factor f_{B1}

Betriebsfaktor f_{B1}

For the calculation of the applied radial force the same service factor applies to the gearmotor and/or speed reducer selection. Please refer to page 14.

Für die Berechnung der Radialbelastung wird der gleiche Betriebsfaktor wie bei Getrieben oder Griebemotoren verwendet. Siehe dazu Information auf der Seite 14.

Notes: The value of the fan has been added to the inertia of the reducer for Sizes 6160 - 6275

The inertia of a double stage unit is calculated by the formula

$$J = J_{G1} + J_{G2}/i_1^2$$

J_{G1} = inertia of first (input) stage

J_{G2} = inertia of second (output) stage; reduce the value of the inertia from above table

i_1 = ratio of the first stage

Anm.: Der Wert des Lüfters ist addiert zum Trägheitsmoment des Getriebes für die Größen 6160 - 6275.

Das Trägheitsmoment des zweistufigen Getriebes ist nach folgender Formel zu errechnen:

$$J = J_{G1} + J_{G2}/i_1^2$$

J_{G1} = Trägheitsmoment der 1. Stufe (Antrieb) aus obiger Tabelle

J_{G2} = Trägheitsmoment der 2. Stufe (Abtrieb) minus Trägheitsmoment aus obiger Tabelle

i_1 = Übersetzung der 1. Stufe

Calculations

Notes: The values in above table do not include inertia of the motor.

Obtain the inertia of a single stage gearmotor by adding the motor inertia from tables for the motor. The inertia of a double stage unit is calculated by the formula

$$J = J_{G1} + J_{G2}/i_1^2$$

J_{G1} = inertia of first (input) stage

J_{G2} = inertia of second (output) stage from reducer inertia; reduce the value of the inertia from above table

i_1 = ratio of the first stage

Anm.: Die Werte in o.g. Tabelle schließen nicht das Trägheitsmoment des Motors ein.

Um das Trägheitsmoment eines einstufigen Getriebemotors zu erhalten, bitte das Trägheitsmoment des Motors aus der Tabelle für Motoren addieren.

Das Trägheitsmoment eines zweistufigen Getriebemotors ist nach folgender Formel zu errechnen:

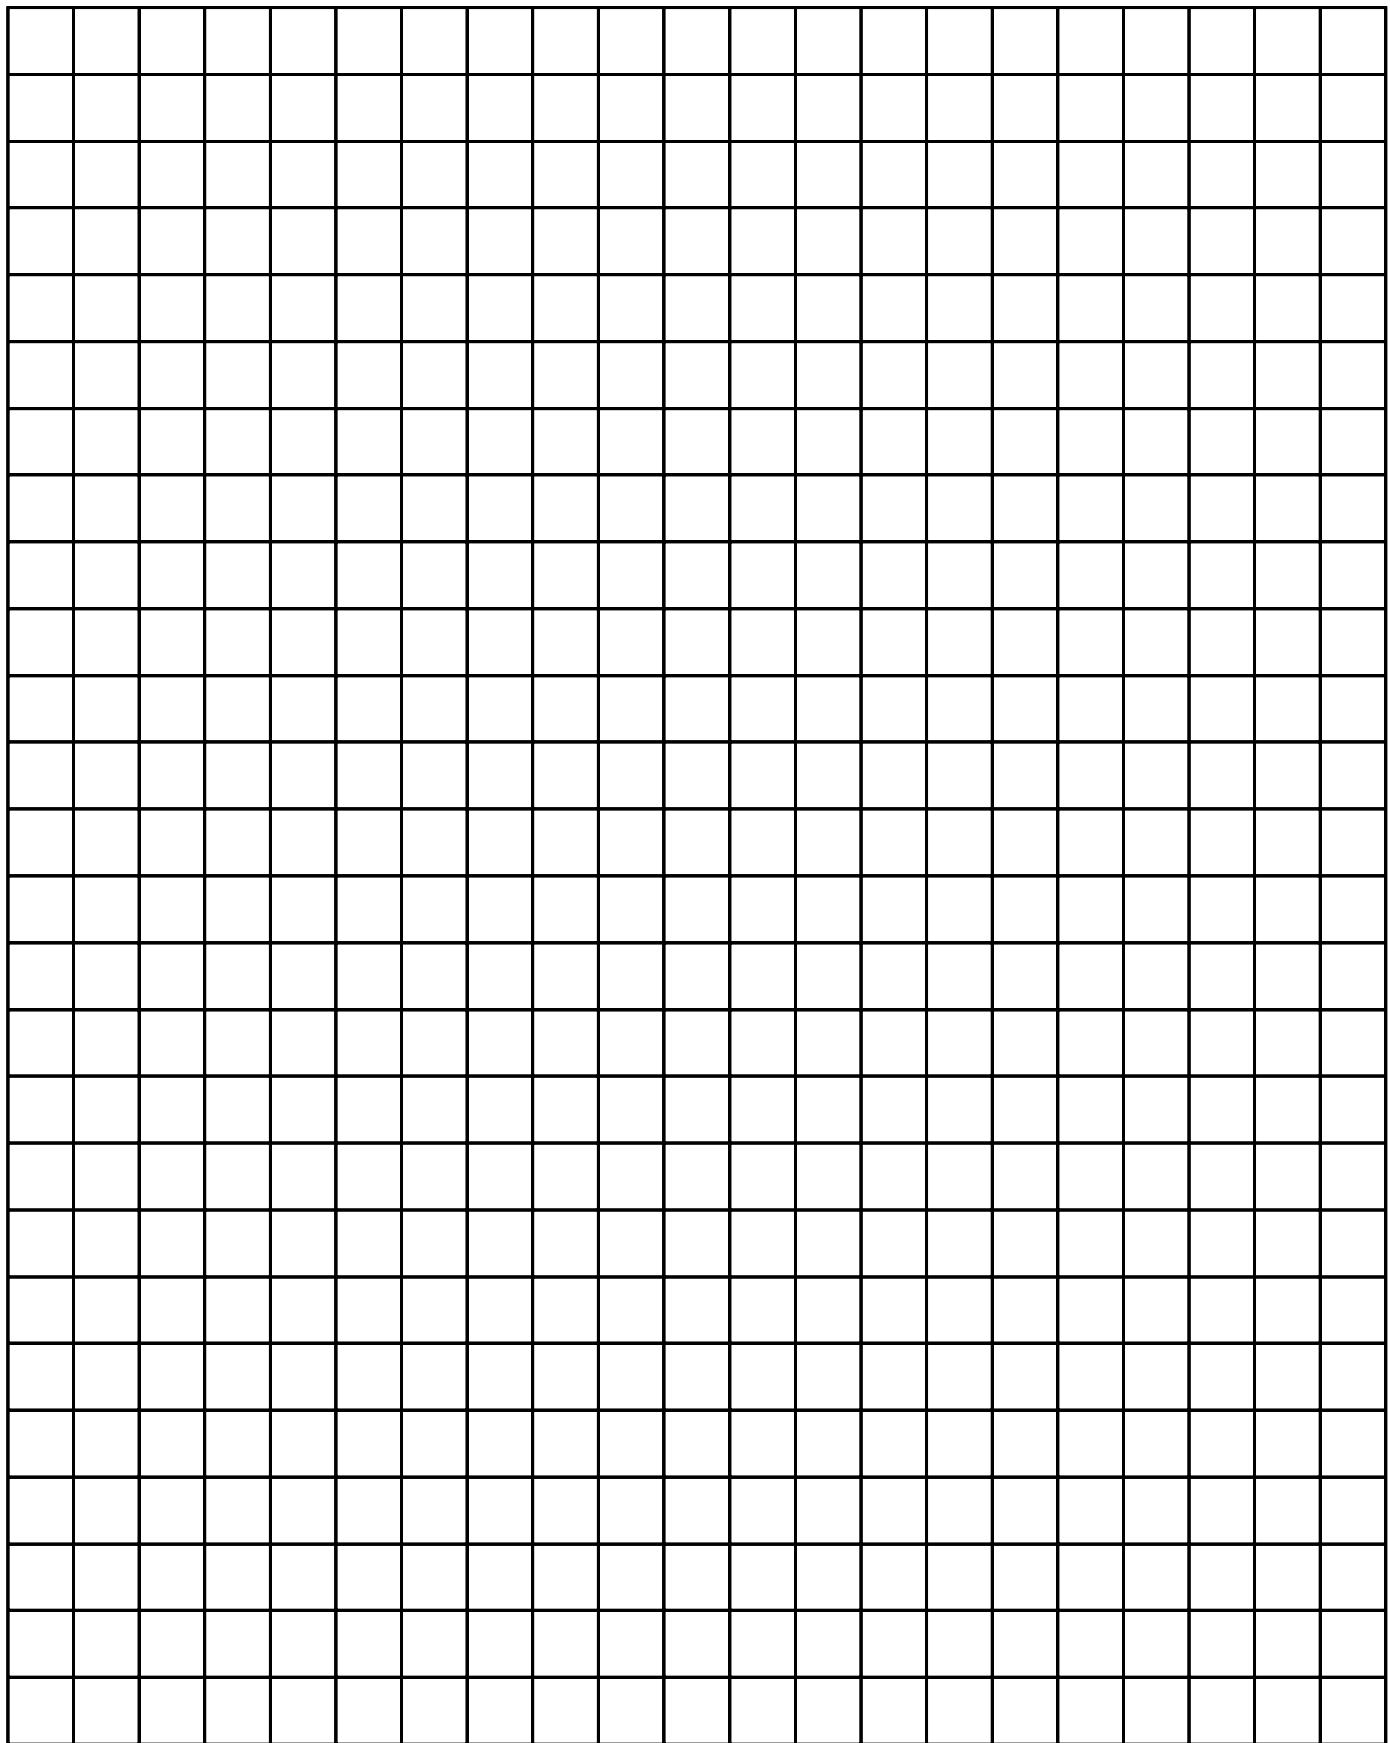

$$J = J_{G1} + J_{G2}/i_1^2$$

J_{G1} = Trägheitsmoment der 1. Stufe (Antrieb) aus obiger Tabelle

J_{G2} = Trägheitsmoment der 2. Stufe (Abtrieb) aus Trägheitsmoment des Getriebes, minus Trägheitsmoment aus obiger Tabelle.

i_1 = Übersetzung der 1. Stufe

Motor information

General Information

Motors directly mounted to the CYCLO

Motor-Information

Allgemeine Information

Motor auf CYCLO Getriebe montiert

General Information

The gearmotor are supplied with directly fitted three phase current squirrel cage motors according EN 60034, IEC 34-1 as described in the selection list.

Upon request we can supply the gearmotor with brakes.

For pole changing motors please consult Sumitomo Drive Technologies.

Very compact size

With the adoption of a unique high precision design, a series of very small electrical motors for industrial application was successfully developed for coupling with the CYCLO Drive.

Low inertia

The compact design of the motor allow for low inertia. This makes this motor an ideal match for the low inertia CYCLO speed reducers.

Excellent heat dissipation

The motor casing made of aluminium provides a good heat dissipation.

Due to the high quality coil isolation the gearmotors are suited for the operation with static frequency inverter.

Allgemeine Information

Die Getriebemotoren werden mit direkt angebauten Asynchron-Kurzschlussläufer-Motoren EN 60034, IEC 34-1 gemäß Auswahlliste geliefert.

Auf Anfrage liefern wir die Getriebemotoren mit Bremse. Für polumschaltbare Motoren bitte Rücksprache mit Sumitomo Drive Technologies.

Äußerst kompakte Bauform

Durch die Optimierung des Motorkonzeptes wurde eine Serie äußerst kompakter Elektromotoren für den industriellen Einsatz entwickelt und für den Direktanbau an CYCLO Drive angepasst.

Geringes Trägheitsmoment

Die kompakte Motorbauform bietet ein geringes Trägheitsmoment. Dadurch sind die Motoren ideal zum Anbau an CYCLO Getriebe geeignet, die sich ebenfalls durch ein geringes Trägheitsmoment auszeichnen.

Ausgezeichnete Wärmeableitung

Das Motorgehäuse aus Alu zeichnet sich durch gute Wärmeableitung aus.

Die hochwertige Wicklungsisolation erlaubt den Betrieb am statischen Frequenzumrichter.

Motor information

General Information

Energy saving motors

Sumitomo's 4-pole AC motors from 1,1 kW to 55 kW fulfil the requirements of the efficiency class EFF2 respectively IE1. EFF1 and IE2 are available on request.

Standards and Regulations

The CYCLO gearmotor comply with the following standards and regulations

EN60034- 1, IEC 34-1
General requirements for rotating electrical machines

EN60034- 6, IEC 34-6
Methods of cooling rotating electrical machines

EN60034- 7, IEC 34-7
Types of construction of rotating electrical machines

EN60034- 14, IEC 34-14
Mechanical vibrations of rotating electrical machines

EN 60 034-5; IEC 60 034-5
Degrees of protection by enclosures for rotating electrical machinery

IEC60034- 8
Terminal designations and direction of rotation of electrical machines

Other Standards and Regulations

Upon request we can supply gearmotor which comply with any other national or international standard.

- NEMA/USA
- JIS, JEM, JEC/Japan
- BS/Great Britain
- UL/CSA

For further details please contact Sumitomo Drive Technologies

Motor-Information

Allgemeine Information

Energiesparende Motoren

Die 4-poligen Sumitomo Drehstrommotoren von 1,1kW bis 55kW erfüllen die Anforderungen der Wirkungsgradklasse EFF2 bzw. IE1. EFF1 und IE2 Motoren sind auf Anfrage erhältlich.

Normen und Vorschriften

Die CYCLO Getriebemotoren entsprechen folgenden Normen und Vorschriften:

EN60034- 1, IEC 34-1
Allgemeine Bestimmungen für umlaufende, elektrische Maschinen.

EN60034- 6, IEC 34-6
Kühlarten umlaufender elektrischer Maschinen.

EN60034- 7, IEC 34-7
Bauformen umlaufender elektrischer Maschinen.

EN60034- 14, IEC 34-14
Mechanische Schwingungen von umlaufenden elektrischen Maschinen.

EN 60 034-5; IEC 60 034-5
Schutzarten umlaufender elektrischer Betriebsmittel.

IEC60034- 8
Anschlussbezeichnungen und Drehsinn von umlaufenden elektrischen Maschinen.

Weitere Normen und Vorschriften

Auf Anfrage sind auch Getriebemotoren lieferbar nach folgenden nationalen oder internationalen Normen und Vorschriften:

- NEMA/USA
- JIS, JEM, JEC/Japan
- BS/Great Britain
- UL/CSA

Für weitere Informationen wenden Sie sich bitte an Sumitomo Drive Technologies.

Motor information Application

Range of application:

Voltage and frequency:

The CYCLO gearmotor is suitable for the connection to the following IEC standard voltages. According to DIN EN 60034-1.

0,12 kW - 4.0 kW

50 Hz : 220-240V Δ / 380 - 420V Y +/- 5 %

Usage with 60 Hz allowable for 440 to 480V

5,5 kW - 55 kW

50 Hz : 380 - 420V Δ +/- 5%

Motor-Information Applikationen

Einsatzbereich:

Spannungsbereich und Frequenz:

Die CYCLO Getriebemotoren sind für den Anschluss an folgende IEC Normspannungen geeignet. Nach DIN EN 60034-1.

0,12 kW - 4,0 kW

50 Hz : 220-240V Δ / 380 - 420V Y +/- 5 %

Der Betrieb an 60 Hz ist von 440-480V möglich

5,5 kW - 55 kW

50 Hz : 380 - 420V Δ +/- 5%

Standard motor data for 440 - 480V 60Hz

Standard Motor Daten für 440 - 480V 60Hz

Motor information

Brake Voltage of Sumitomo Standard Motors

Motor voltage 400V 50Hz, connection Y
Standard brake control voltage is 230V

The motor will be run at 400V.

The rectifier is pre connected to the terminal block.

The connection bars at the terminal block have to be fixed by the customer acc. to the supply voltage.

Here 400V Y-connection. The voltage between L1/U1 and the so called "star-point" is 230V.

The rectifier for the brake is automatically supplied with 230V.
400V brake is not necessary.

Motor-Information

Bremsenspannung bei Sumitomo Standard Motoren

0,12 - 4,0 kW

Motorspannung 400 V 50 Hz Schaltung Y
Standard Bremssteuerspannung ist 230V

Der Motor wird an 400V betrieben.

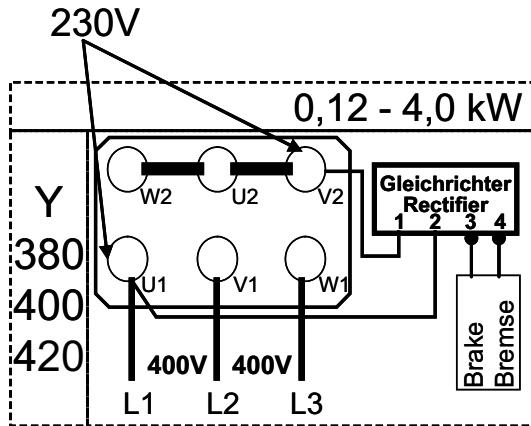

Der Gleichrichter ist standardmäßig ans Klemmbrett angeschlossen.

Die Brücken am Klemmbrett müssen vom Kunden je nach Spannung eingelegt werden. Hier Y-Schaltung.

Die Spannung zwischen L1/U1 und dem so genannten "Sternpunkt" ist 230V.

Der Gleichrichter für die Bremse bekommt hier automatisch 230V vom Klemmbrett.

Eine 400V Bremse ist nicht erforderlich.

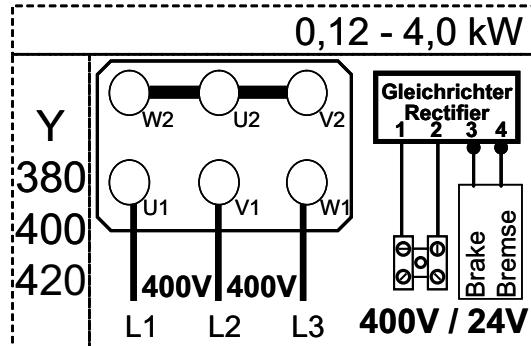

400V brake is available as option.

The brake will be supplied separately with 400V AC.

The 24V DC brake is also supplied separately.

Eine 400V Bremse ist optional verfügbar. Diese wird separat mit 400V versorgt.

Auch die 24V DC Bremse wird separat angesteuert.

Brake torque:

The brake motor will be supplied with the standard brake torque. The brake motors can be supplied with the increased torque on request.

If you require larger or smaller brake torque than those listed, please advise the factory when ordering.

Characteristics of the FB brakes

- Low inertia
- Long life
- Low maintenance
- Enclosure IP 44 (IP 54, 55 upon request)
- One touch brake release lever for upon request, for size: FB-01A - FB-15B

The standard brakemotor used for outdoor installation must be IP55.

For vertical mounting a canopy must be used.

The rectifier shown is supplied in the motor terminal box.

Bremsmoment:

Die Bremsmotoren werden mit dem Standard-Bremsmoment geliefert. Die Bremsen können auf Anfrage mit dem erhöhten Bremsmoment geliefert werden.

Für Bremsmomente außerhalb dieses Bereiches bitten wir um Rücksprache.

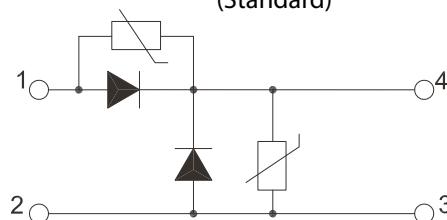

FB Bremsen - Merkmale

- Geringes Trägheitsmoment
- Lange Lebensdauer
- Geringe Wartungsanforderungen
- Schutzart IP 44 (IP 54, 55)
- Hebel für Handlüftung als Option lieferbar für Größe: FB-01A - FB-15B

Für die Aufstellung im Freien muss die Bremse in Schutzart IP 55 ausgeführt sein.

Bei Bauform V1 (vertikal) muss ein Schutzdach vorgesehen werden.

Der Gleichrichter ist im Klemmenkasten eingebaut (Standard)

Motor information

Typical brakemotor wiring

Illustrated below is a typical brakemotor wiring schematic. The rectifier shown is supplied in the motor terminal box.

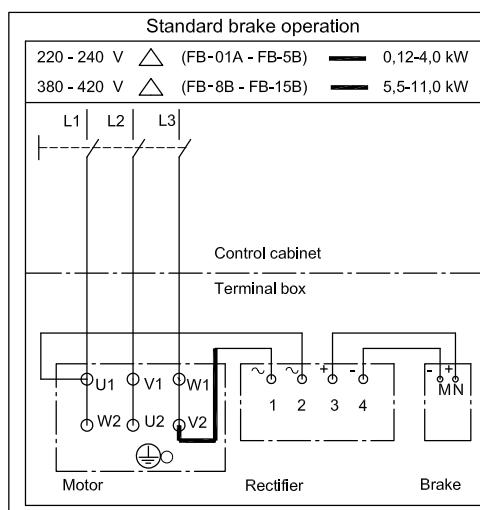

Motor-Information

Bremsmotor Anschlussdiagramm

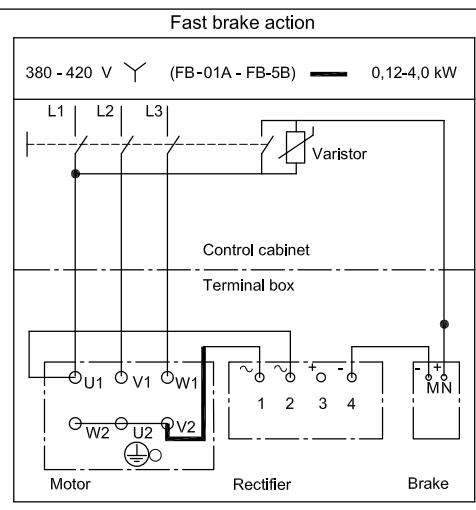

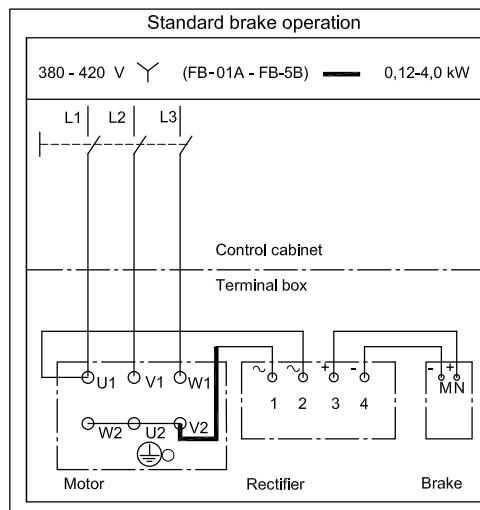

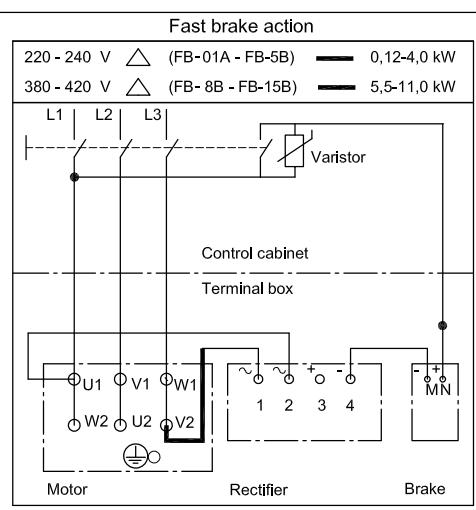

Die folgenden Abbildungen zeigen Schaltbilder der Bremsmotoren.

Der Gleichrichter ist im Klemmenkasten eingebaut.

Brake FB-01A to FB-15B

Bremse FB-01A bis FB-15B

DRIVE 6000

Motor information

Brakemotor

In case of fast brake operation, please protect the external switch contact with a varistor acc. to the specification below:

| VARISTOR Specification | | |
|---|-------------------------------|----------|
| Motor operating voltage | 230 V | 400 V |
| Varistor rated voltage | AC 260 - 300 V | AC 510 V |
| Varistor voltage | 430 470 V | 820 V |
| Varistor FB-01A, FB-02A, FB-05A rated power | < 0,2 W > 0,4 W > 0,6 W | |
| FB-1D FB-2D, FB-3D, FB-5B, FB-8B, FB10B, FB-15B | | > 1,5 W |

Motor-Information

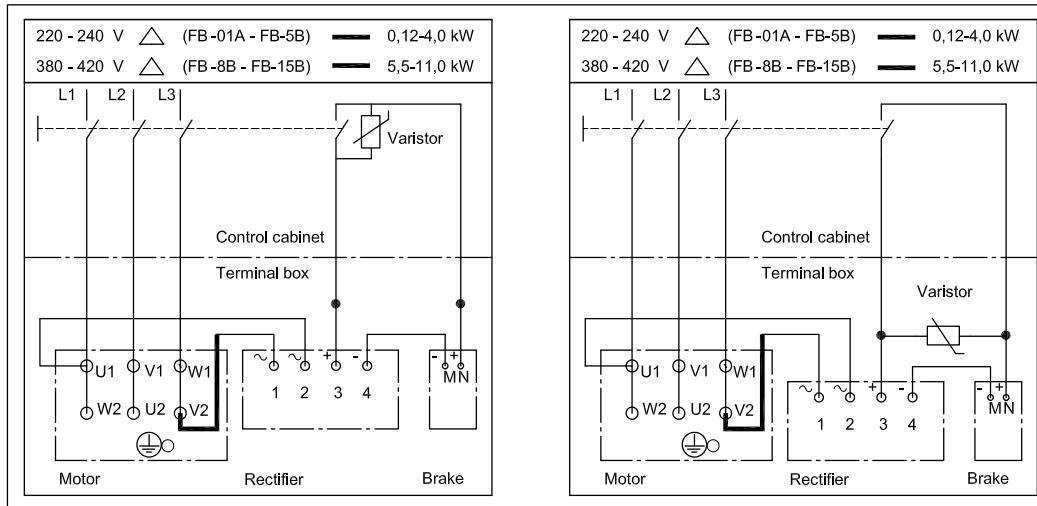

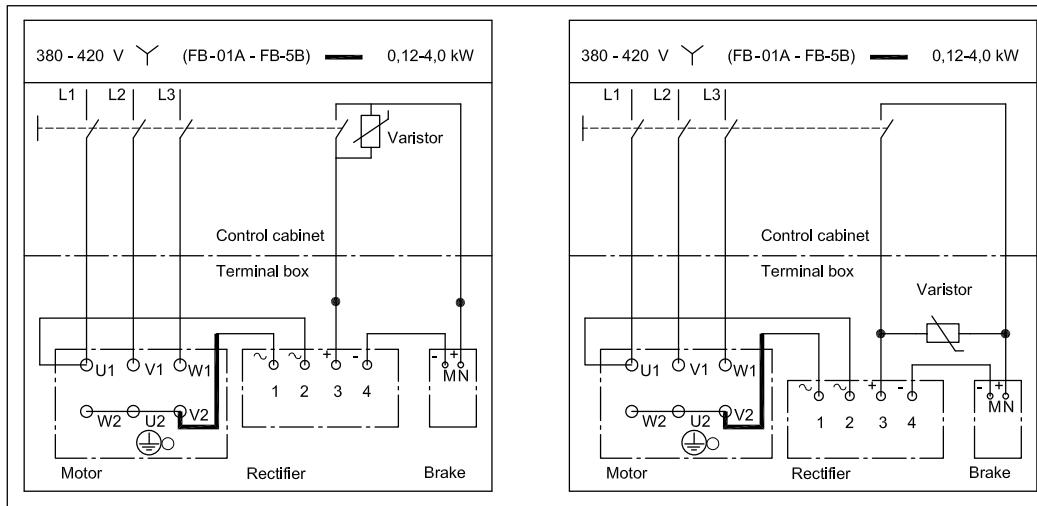

Bremsmotor

Wenn Sie die Einfallzeit der Bremse beschleunigen, schützen Sie den externen Schaltkontakt mit einem Varistor mit u.a. Spezifikation:

| VARISTOR Spezifikation | | |
|---|-------------------------------|----------|
| Motor Betriebsspannung | 230 V | 400 V |
| Varistor Nennspannung | AC 260 - 300 V | AC 510 V |
| Varistorspannung | 430 470 V | 820 V |
| Varistor FB-01A, FB-02A, FB-05A Nennleistung | < 0,2 W > 0,4 W > 0,6 W | |
| FB-1D FB-2D, FB-3D, FB-5B, FB-8B, FB10B, FB-15B | | > 1,5 W |

Alternatively the varistor can be placed according to the diagrams below:

Alternativ kann ein Varistor wie folgt verwendet werden:

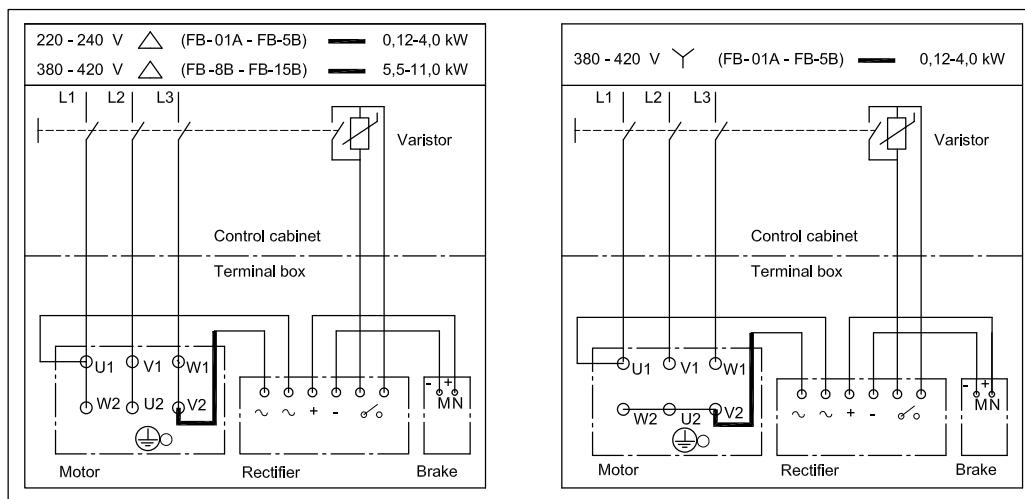

Motor information Brakemotor

Alternatively a 6-pole rectifier can be used:

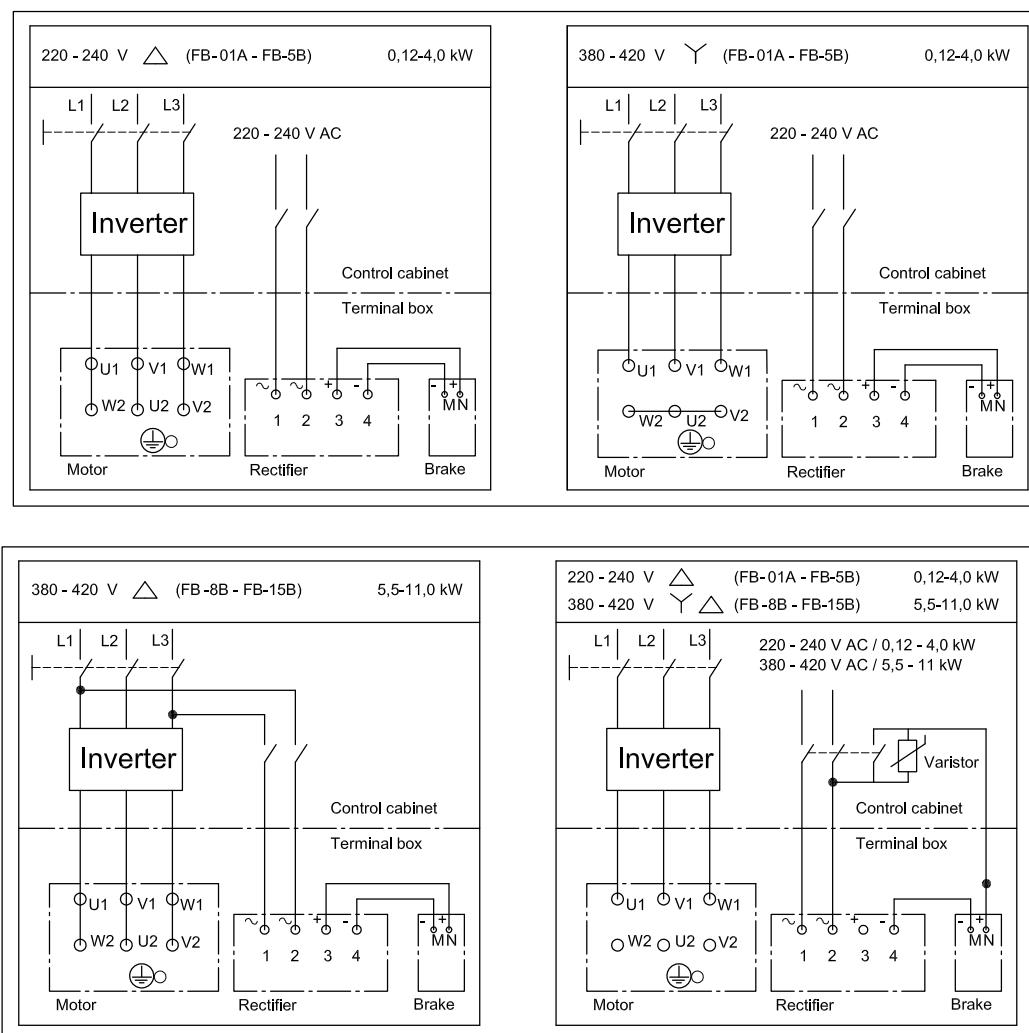

Motor-Information Bremsmotor

Alternativ sind 6-polige Gleichrichter verfügbar:

For motors driven by an inverter, the brake must be supplied separately, as shown below

Bei Motoren, die am Frequenzumrichter betrieben werden, muss die Bremse separat mit einer sinusförmigen Wechselspannung versorgt werden:

DRIVE 6000

Motor information

Range of application

Motors wound for 50 Hz can be connected to 60 Hz with the same winding, if certain changes of the operating values are acceptable. If the operating voltage deviates from the rated voltage, the starting torque and the pull-out torque will change with the square of the voltage.

In addition to the standard 50 Hz nameplate data, the following factors are valid for the operating at 60 Hz:

Motor-Information

Einsatzbereich

Für 50 Hz gewickelte Motoren können mit gleicher Wicklung auch an 60 Hz angeschlossen werden, wenn gewisse Änderungen der Betriebswerte in Kauf genommen werden. Weicht die Betriebsspannung von der Nennspannung ab, ändern sich das Anzugsmoment und das Kippmoment mit dem Quadrat der Spannung.

Zusätzlich zu den Daten auf dem Typenschild gilt für die Betriebswerte bei 60 Hz folgendes:

Factors of change for the operating values at 60 Hz

Änderungsfaktoren für die Betriebswerte bei 60 Hz

| wiring voltage for 50 Hz Wicklungsspannung für 50 Hz | voltage at 60 Hz Spannung bei 60 Hz | factor speed Faktor Drehzahl n_{60Hz}/n_{50Hz} | factor power Faktor Leistung n_{60Hz}/n_{50Hz} | factor rated torque Faktor Nennmoment M_{N60Hz}/M_{N50Hz} | factor break down starting torque Faktor Kipp-/ Anzugsmoment M_{K60Hz}/M_{K50Hz} |
|---|--|--|--|---|--|
| Volt | Volt | K1 | K2 | K3 | K4 |
| 230 | 220 | 1,2 | 0,9 | 0,75 | 0,63 |
| 230 | 230 | 1,2 | 1,0 | 0,83 | 0,69 |
| 400 | 380 | 1,2 | 0,9 | 0,75 | 0,63 |
| 400 | 400 | 1,2 | 1,0 | 0,83 | 0,69 |
| 400 | 440 | 1,2 | 1,1 | 0,92 | 0,76 |
| 400 | 460 | 1,2 | 1,2 | 1,00 | 0,83 |
| 400 | 480 | 1,2 | 1,2 | 1,00 | 0,83 |

Insulation

All motors have insulation class F as standard.

The temperature rise for duty at the common mains is according insulation class B (F rise B).

Insulation class H can be supplied to special order.

Isolation

Alle Motoren sind standardmäßig mit einer Isolation der Klasse F ausgestattet.

Im Netzbetrieb werden diese nach Wärmeklasse B ausgenutzt (F nach B). Isolationsklasse H auf Anfrage möglich.

Cooling and ventilation

Motors are fitted with plastic or aluminium radial fans that function independently of the direction of rotation (IC 410 to EN60034- 6, IEC 34-6).

Motors of frame size 63S have no fan (IC 410).

Kühlung und Belüftung

Standardmotoren enthalten Radiallüfter aus Kunststoff oder Aluminium, die unabhängig von der Drehrichtung des Motors kühlen. (IC 410 nach EN60 034-6, IEC 34- 6) Motoren der Baugröße 63S werden ohne Lüfter ausgeführt. (IC 410).

Motor information**Range of application****Installation**

Ventilation openings must be kept clear.

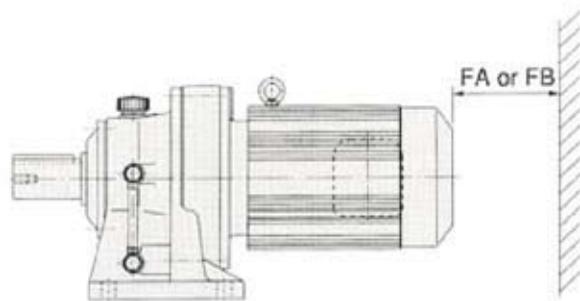

For proper cooling the distance FB is the minimum required between the cover and the wall. FA is the minimum clearance required for disassembling the fan cover.

Motor-Information**Einsatzbereich****Aufstellung**

Die Lüftungsöffnungen in der Lüfterhaube dürfen nicht verschlossen werden.

Für eine ausreichende Kühlung darf der Abstand der Haube zur Wand das Maß FB nicht unterschreiten.

FA ist der Mindestabstand, der zur Demontage der Lüfterhaube erforderlich ist.

DRIVE 6000

Motor information

Range of application

Speed and direction of rotation

The values of rated speed are referred to operation under rated conditions.

The synchronous speed varies in direct proportion to the frequency of the power supply system.

The motors are suitable for operating in either direction of rotation.

Power

The rated power of the gearmotor listed in the selection sheets applies to continuous duty "S1" according to VDE 0530 part 1 at an ambient temperature of +40 °C and at an altitude of up to 1000 m above sea level.

For other working conditions the allowable motor power has to be determined according to the following tables.

If a different ambient temperature occurs simultaneously with a different altitude, the factors have to be multiplied together. For further information, please consult Sumitomo Drive Technologies.

Motor-Information

Einsatzbereich

Drehzahl und Drehrichtung

Die Nenndrehzahlen gelten bei Nennbedingungen.

Die synchrone Drehzahl ändert sich proportional mit der Netzfrequenz.

Die Motoren sind für Betrieb in beiden Drehrichtungen geeignet.

Leistung

Die in den Auswahltabellen angegebene Nennleistung gilt für Dauerbetrieb „S1“ nach DIN VDE 0530 Teil 1 bei einer Frequenz von 50 Hz, einer Kühlmitteltemperatur KT von +40 °C und einer Aufstellhöhe bis 1000 m über NN.

Bei abweichenden Bedingungen ist die zulässige Leistung nach folgenden Tabellen zu bestimmen.

Treten abweichende Kühlmitteltemperaturen und Aufstellungshöhen gleichzeitig auf, so sind die Faktoren für die zulässige Leistung zu multiplizieren. In Zweifelsfällen bitte Rückfrage bei Sumitomo Drive Technologies.

| ambient temperature Umgebungstemperatur | allowable power in % of rated power zulässige Leistung in % der Nennleistung | altitude above sea level Aufstellungshöhe über NN [m] | altitude power in % of rated power zulässige Leistung in % der Nennleistung |
|--|---|---|--|
| [° C] | % | [m] | % |
| 10 | 100 | 1000 | 100 |
| 15 | 100 | 1500 | 97 |
| 20 | 100 | 2000 | 94 |
| 25 | 100 | 2500 | 91 |
| 30 | 100 | 3000 | 88 |
| 35 | 100 | 3500 | 85 |
| 40 | 100 | | |
| 45 | 95 | | |
| 50 | 90 | | |

* For higher temperatures, please consult Sumitomo Drive Technologies.

* Bei höheren Temperaturen bitte Rückfrage bei Sumitomo Drive Technologies.

Motor information

Mechanical Features

Protection

The motors are totally enclosed and fan cooled. Standard protection is IP 55, and with brake IP 44.

For further details please refer to the table below.

Regarding other enclosures please contact Sumitomo Drive Technologies.

1, Index Protection n against Human/Tool Contact

- 0 No special protection
- 1 Large foreign bodies, diam, >50mm
- 2 Medium-sized foreign bodies, diam, >12 mm
- 3 Small foreign bodies, diam, >2,5mm
- 4 Granular foreign bodies, diam, >1mm
- 5 Dust protected; dust deposits are permitted, but their volume must not affect the function of the unit,
- 6 Dust- proof

2, Index Protection against water

- 0 No special protection
- 1 Water dripping/falling vertically
- 2 Water sprayed at an angle (up to 15° degrees from the vertical)
- 3 Spray water (any direction up to 60° degrees from the vertical)
- 4 Spray water from all directions, (limited ingress permitted)
- 5 Low pressure water jets from all directions, (limited ingress permitted)
- 6 High pressure jets from all directions, (limited ingress permitted)
- 7 Temporary immersion, 15 cm to 1m
- 8 Permanent Immersion, under pressure

Note: In case of increased water protection requirements use Motor IP 56, not IP 65!
At higher humidity with condensation, an anti-condensation heater is required (space heater).
Depending on the application, IP67 or IP68 can be necessary.
For dusty ambients IP65 shall be used.

Motor-Information

Mechanische Merkmale

Schutzart

Die Motoren sind völlig verschlossen und luftgekühlt. Standardschutzart ist IP55 mit Bremse IP44.

Weitere Details sind in der Tabelle unten enthalten.

Für weitere Fragen wenden Sie sich bitte an Sumitomo Drive Technologies.

1, Index Schutz gegen Berührung und Fremdkörper

- 0 kein besonderer Schutz
- 1 Schutz gegen Eindringen fester Fremdkörper mit Ø > 50 mm
- 2 Schutz gegen Eindringen fester Fremdkörper mit Ø > 12 mm
- 3 Schutz gegen Eindringen fester Fremdkörper mit Ø > 2,5 mm
- 4 Schutz gegen Eindringen fester Fremdkörper mit Ø > 1 mm
- 5 Schutz gegen schädliche Staubablagerungen (staubgeschützt)
- 6 Vollständiger Berührungsschutz, staubdicht

2, Index Schutz gegen Wasser

- 0 kein besonderer Schutz
- 1 Schutz gegen senkrecht tropfendes Wasser
- 2 Schutz gegen senkrecht tropfendes Wasser, Betriebsmittel bis 15° gekippt
- 3 Schutz gegen Sprühwasser bis zu einem Winkel von 60° zur Senkrechten
- 4 Schutz gegen Spritzwasser aus allen Richtungen
- 5 Schutz gegen Strahlwasser (Düse) aus allen Richtungen
- 6 Schutz gegen starken Wasserstrahl oder schwere See
- 7 Schutz gegen Wasser bei Eintauchen des Betriebsmittels unter Druck- u. Zeitbedingungen
- 8 Schutz gegen Wasser bei dauerndem Eintauchen des Betriebsmittels in Wasser

Bem.: Bei erhöhten Anforderungen an Wasserschutz sollten Motoren in IP 56 ausgeführt werden und nicht in IP 65!
Bei feuchter Umgebung mit Betauung ist eine Stillstandsheizung erforderlich.
Je nach Applikation ist IP67 oder IP68 erforderlich.
Bei staubiger Umgebung kann IP65 verwendet werden.

DRIVE 6000

Motor information Mechanical Features

Protection for vertically mounted motors

A motor with canopy is recommended for gearmotor designed with slow speed shaft pointing downwards.

Anti-condensation heaters

Anti-condensation heaters can be fitted to motors whose windings are exposed to the danger of condensation due to damp environment or wide fluctuations in temperature.

The anti-condensation heaters must not be switched on while the motors are running.

Balancing

The motors comply with the vibration severity grade N to DIN EN 60 034-14

Motor-Information Mechanische Merkmale

Motoren für vertikale Einbaulage

Getriebemotoren, die mit der Abtriebswelle nach unten eingebaut werden, sollten ein Motorschutzdach erhalten.

Stillstandsheizung

Motoren, deren Wicklung aufgrund feuchter Umgebung oder starker Temperaturschwankungen der Betauungsgefahr ausgesetzt sind, können mit einer Stillstandsheizung ausgerüstet werden.

Während des Betriebs darf die Stillstandsheizung nicht eingeschaltet werden.

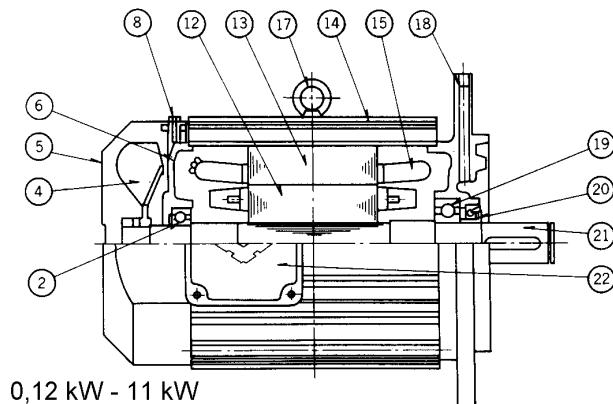

Schwingstärke

Die Rotoren der Motoren sind nach IEC 34 entsprechend der Schwingstärke "N" ausgeführt.

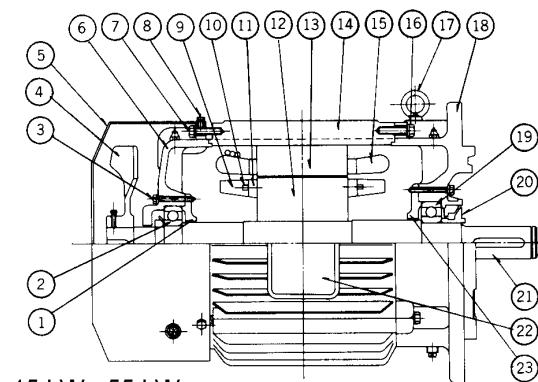

Dynamisches Wuchten erfolgt gemäß DIN ISO 1940 T1, Gütestufe G 2,5.

| 21 | Motor Shaft | Motorwelle |
| 22 | Terminal Box | Klemmenkasten |
| 23 | Bearing Cover | Lagerdeckel |

*) Do not remove the eye bolt when the motor is used outside. If it is removed, close the tapped hole by a substitute bolt to avoid ingress of water.

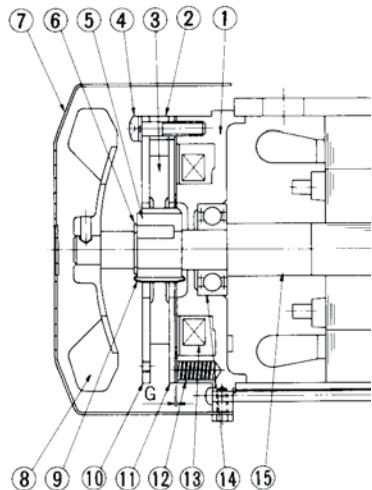

*) Wenn der Motor im Freien aufgestellt ist, darf die Ringschraube nicht entfernt werden. Wenn die Schraube fehlt, Bohrung mit Ersatzschraube schließen um Wassereintritt zu vermeiden.

DRIVE 6000

Motor information Motor Options

Motor Options:

In addition to brake the following options are available:

Motor standard options:

- Hand release lever for brake
- 6-pole rectifier
- Thermistor PTC
- TOC (bimetal, break contact)
- Canopy
- External fan
- Incremental encoder
- Space heater
- Harting connector (Han Drive, 10-pin)

Motor-Information Motor Ausführungen

Motor Optionen

Neben der Bremse sind folgende Optionen verfügbar:

Motor, Standard Optionen:

- Handlüftung der Bremse
- 6-poliger Gleichrichter
- Kaltleiter PTC
- Bimetall Temperaturwächter
- Schutzdach
- Fremdlüfter
- Inkrementalgeber
- Stillstandsheizung
- Harting Stecker (Han Drive, 10-polig)

Further available options:

- Pole changing motors
- High inertia fan
- UL or CSA- design
- NEMA electrical
- Insulation class H
- 2nd shaft (IEC)
- IP 56 / IP 65 (no heavy sea)
- Special winding with free voltage/Frequency relation
- IP 55 brake

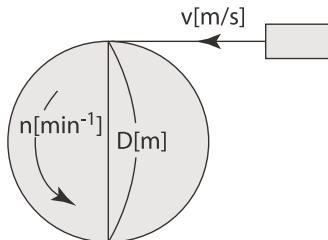

Weitere lieferbare Optionen:

- Polumschaltbare Motoren
- Schwungmassen- Lüfter
- UL oder CSA- Ausführung
- NEMA elektrisch
- ISO Klasse H
- 2. Wellenende nach IEC
- IP 56 / IP 65 (keine schwere See)
- Sonderwicklungen mit beliebiger Spannungs- / Frequenz Zuordnung
- IP 55 Bremse

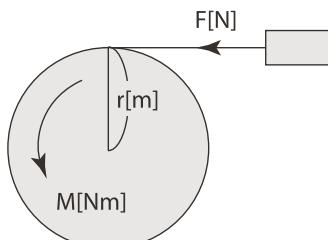

Motor information

Formula of Drive Systems (SI Units)

1. Revolving Speed n [min⁻¹], velocity v [m/s]

2. Torque M [n • m]

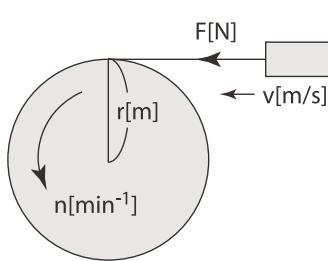

3. Power P [kW]

4. Power P [kW], Torque M [Nm], Revolving Speed n, [min⁻¹]

$$P = \frac{n \cdot M}{9550} \quad [\text{kW}], \quad M = \frac{9550 \cdot P}{n} \quad [\text{Nm}],$$

Motor-Information

Formel von Drive System (SI einheiten)

1. Drehzahl n [min⁻¹], Geschwindigkeit v [m/s]

$$v = \pi \cdot D \cdot \frac{n}{60} \quad [\text{m/s}]$$

D : Wheel diameter [m] Kreisdurchmesser [m]

[$\pi = 3.14$]

2. Drehmoment M [n • m]

$$M = F \cdot r \quad [\text{Nm}]$$

F : Load [N] Belastung [N]

r : Wheel radius [m] Kreisdurchmesser [m]

3. Leistung P [kW]

$$P = \frac{F \cdot v}{1000} \quad [\text{kW}]$$

F : Load [N] Belastung [N]

v : Velocity [m/s] Geschwindigkeit [N]

4. Leistung P [kW], Drehmoment M [Nm], Drehzahl n [min⁻¹]

$$P = \frac{F \cdot v}{1000} \quad [\text{kW}] \quad v = \pi \cdot 2 \cdot r \cdot \frac{n}{60} \quad [\text{m/s}]$$

$$P = \frac{F \cdot \pi \cdot 2 \cdot r \cdot \frac{n}{60}}{1000} = \frac{2 \cdot \pi}{1000 \times 60} \cdot n \cdot F \cdot r \quad [\text{kW}]$$

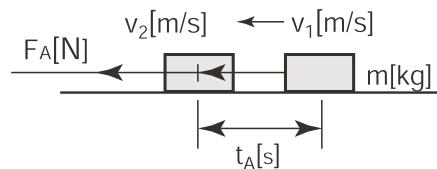

$$M = F \cdot r$$

$$P = \frac{2 \cdot \pi}{1000 \times 60} \cdot n \cdot M = \frac{n \cdot M}{9550} \quad [\text{kW}]$$

DRIVE 6000

Motor information Formulas

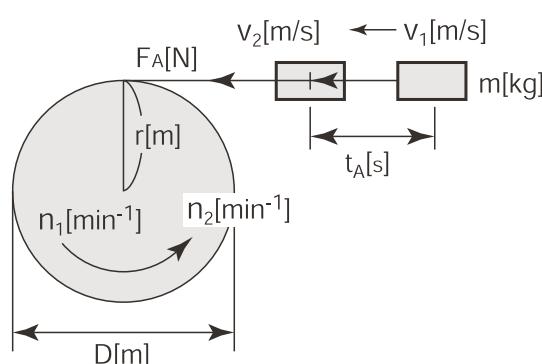

5. Acceleration Force F_A [N]

$$F_A = m \cdot \mu = m \cdot \frac{v_2 - v_1}{t_A} [N]$$

$$\mu = \frac{v_2 - v_1}{t_A}$$

6. Acceleration Torque M [Nm]

Motor-Information Formeln

5. Beschleunigungskraft F_A [N]

$$M_A = F_A \cdot r, \quad F_A = m \cdot \frac{v_2 - v_1}{t_A}$$

$$v_2 = \pi \cdot D \cdot \frac{n_2}{60} \quad v_1 = \pi \cdot D \cdot \frac{n_1}{60}$$

$$D = 2 \cdot r$$

$$M_A = m \cdot \frac{\pi \cdot 2 \cdot m \cdot r}{60} \cdot \frac{n_2 - n_1}{t_A} \cdot r$$

$$= \frac{2 \cdot \pi \cdot m \cdot r}{60} \cdot \frac{n_2 - n_1}{t_A} \cdot r$$

$$= \frac{m \cdot r^2}{9.55} \cdot \frac{n_2 - n_1}{t_A} [Nm]$$

$$M_A = \frac{J}{9.55} \cdot \frac{n_2 - n_1}{t_A} [Nm]$$

7. Synchronized Revolving Speed of AC Motor n_0 [min^{-1}]

$$n_0 = \frac{120 \cdot f}{P} [\text{min}^{-1}]$$

f : Power supply frequency [Hz] / Netzfrequenz [Hz]
P : Number of motor poles / Pohlzahl des Motors

7. Synchrone Drehzahl des Drehstrommotors n_0 [min^{-1}]

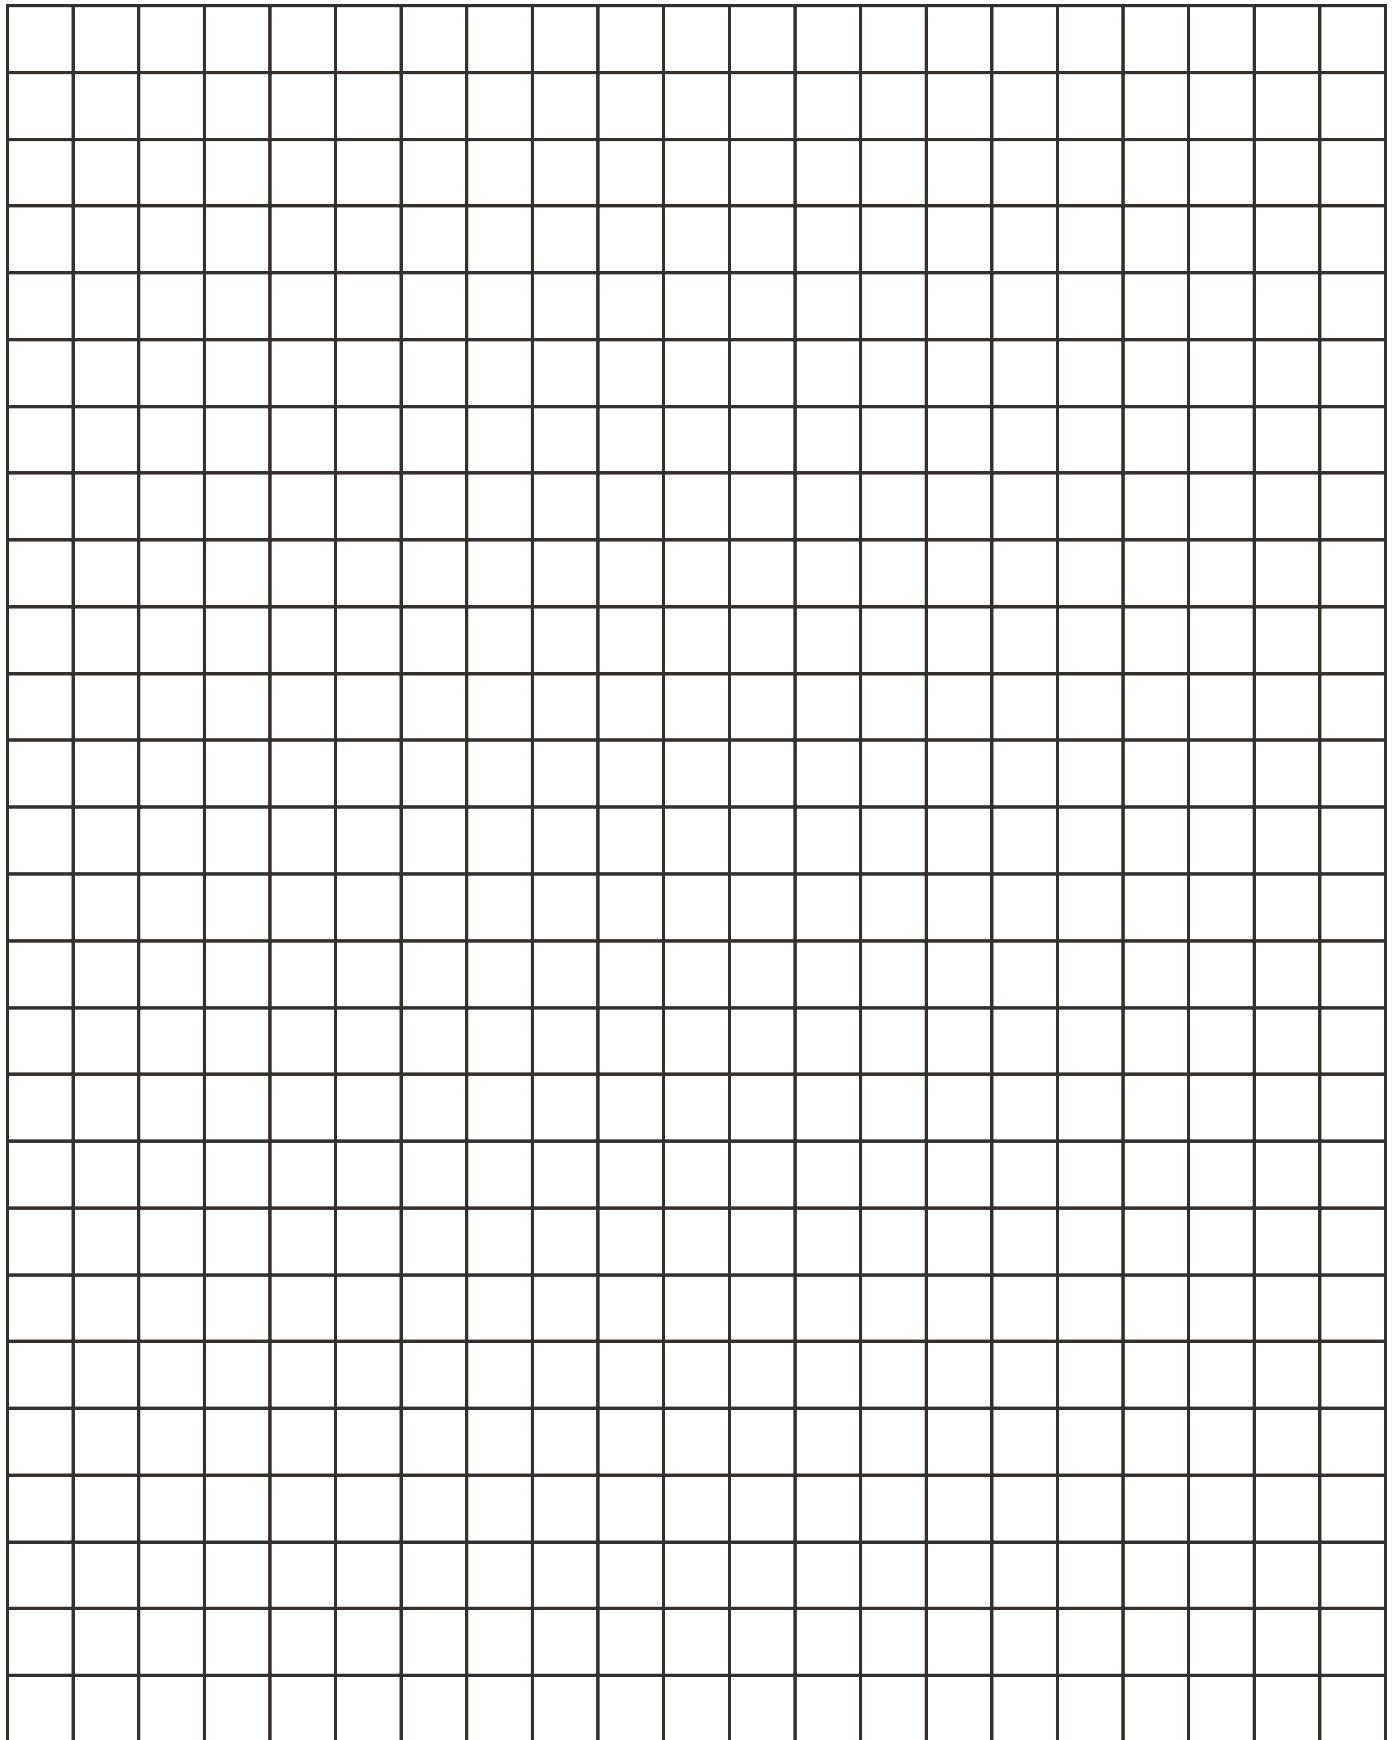

8. Acceleration Torque M [Nm]

$$n = n_0 [1 - S] [\text{min}^{-1}]$$

n_0 : Synchronized Revolving Speed [min^{-1}] / Synchrone Drehzahl [min^{-1}]
S : Slippage / Schlupf

8. Anlaufmoment M [Nm]
