1 Quick Guide

1.1 Safety

AWARNING

HIGH VOLTAGE

Frequency converters contain high voltage when connected to AC mains input, DC supply, or load sharing. Failure to perform installation, start-up, and maintenance by qualified personnel can result in death or serious injury.

 Installation, start-up, and maintenance must be performed by qualified personnel only.

AWARNING

UNINTENDED START

When the frequency converter is connected to AC mains, the motor may start at any time, causing risk of death, serious injury, equipment, or property damage. The motor can start by means of an external switch, a fieldbus command, an input reference signal from the LCP or LOP, or after a cleared fault condition.

- Disconnect the frequency converter from mains whenever personal safety considerations make it necessary to avoid unintended motor start.
- Press [Off/Reset] on the LCP before programming parameters.
- The frequency converter, motor, and any driven equipment must be in operational readiness when the frequency converter is connected to AC mains.

NOTICE

The [Off/Reset] key is not a safety switch. It does not disconnect the frequency converter from mains.

AWARNING

DISCHARGE TIME

The frequency converter contains DC-link capacitors, which can remain charged even when the frequency converter is not powered. Failure to wait the specified time after power has been removed before performing service or repair work, could result in death or serious injury.

- Stop motor.
- Disconnect AC mains, permanent magnet type motors, and remote DC-link power supplies, including battery back-ups, UPS, and DC-link connections to other frequency converters.
- Wait for the capacitors to discharge fully, before performing any service or repair work. The duration of waiting time is specified in Table 1.1.

| Size | Minimum waiting time (minutes) |
|---------------|--------------------------------|
| M1, M2 and M3 | 4 |
| M4 and M5 | 15 |

Table 1.1 Discharge Time

Leakage current (>3.5 mA)

Follow national and local codes regarding protective earthing of equipment with a leakage current >3,5 mA. Frequency converter technology implies high frequency switching at high power. This generates a leakage current in the ground connection. A fault current in the frequency converter at the output power terminals might contain a DC component, which can charge the filter capacitors and cause a transient ground current. The ground leakage current depends on various system configurations including RFI filtering, screened motor cables, and frequency converter power.

EN/IEC61800-5-1 (Power Drive System Product Standard) requires special care if the leakage current exceeds 3.5 mA. Reinforce Grounding in 1 of the following ways:

- Grounding wire of at least 10 mm².
- 2 separate ground wires both complying with the dimensioning rules.

See EN 60364-5-54 § 543.7 for further information.

Using RCDs

Where residual current devices (RCDs), also known as earth leakage circuit breakers (ELCBs), are used, comply with the following:

- Use RCDs of type B that can detect AC and DC currents.
- Use RCDs with an inrush delay to prevent faults due to transient ground currents.
- Dimension RCDs according to the system configuration and environmental considerations.

Motor thermal protection

Motor overload protection is possible by setting *1-90 Motor Thermal Protection* to [4] ETR trip. For the North American market: Implemented ETR function provides class 20 motor overload protection, in accordance with NEC.

Installation at high altitudes

For altitudes above 2000 m, contact Danfoss regarding PFI V.

1.1.1 Safety Instructions

- Make sure that the frequency converter is properly grounded.
- Do not remove mains connections, motor connections, or other power connections while the frequency converter is connected to power.
- Protect users against supply voltage.
- Protect the motor against overloading according to national and local regulations.
- The ground leakage current exceeds 3.5 mA.
 Ground the frequency converter properly.
- The [Off/Reset] key is not a safety switch. It does not disconnect the frequency converter from mains.

1.2 Introduction

1.2.1 Purpose of the Manual

These operating instructions provide information for safe installation and commissioning of the VLT[®] Micro Drive FC 51 frequency converter.

The operating instructions are intended for use by qualified personnel.

To use the frequency converter safely and professionally, read and follow the operating instructions. Pay particular attention to the safety instructions and general warnings. Always keep these operating instructions with the frequency converter.

VLT® is a registered trademark.

1.2.2 Additional Resources

Additional resources are available to understand advanced frequency converter functions and programming:

- The VLT® Micro Drive FC 51 Programming Guide provides greater detail on working with parameters and many application examples.
- The VLT® Micro Drive Design Guide provides detailed information about capabilities and functionality to design motor control systems.
- Instructions for operation with optional equipment, and replacement of components.

Supplementary publications and manuals are available at: vlt-drives.danfoss.com/Support/Technical-Documentation/

1.2.3 Approvals

The frequency converter complies with UL508C thermal memory retention requirements. For more information, refer to the section *Motor Thermal Protection* in the product specific *design guide*.

1.2.4 IT Mains

NOTICE

IT MAINS

Installation on isolated mains source, that is IT mains. Maximum supply voltage allowed when connected to mains: 440 V.

As an option, Danfoss offers recommended line filters for improved harmonics performance. *Table 1.10*

1.2.5 Avoid Unintended Start

While the frequency converter is connected to mains, the motor can be started/stopped using digital commands, bus commands, references, or via the LCP (local control panel). To avoid unintended start:

- Disconnect the frequency converter from mains for personal safety considerations.
- Always press [Off/Reset] before changing parameters.

Equipment containing electrical components must not be disposed of together with domestic waste.

It must be separately collected with electrical and electronic waste according to local and currently valid legislation.

1.3 Installation

- Disconnect the FC 51 from mains (and external DC supply, if present).
- 2. Wait for 4 minutes (M1, M2 and M3) and 15 minutes (M4 and M5) for discharge of the DC-link. See *Table 1.1*.
- 3. Disconnect DC bus terminals and brake terminals (if present).
- 4. Remove motor cable.

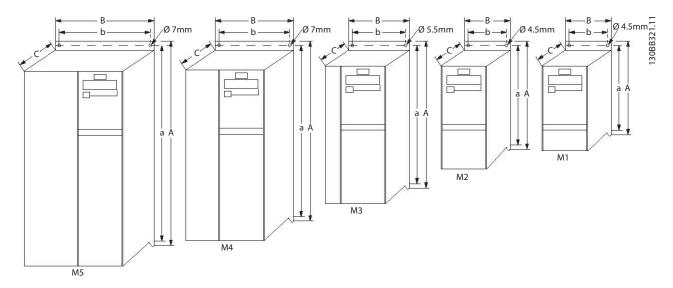

1.3.1 Side-by-side Installation

The frequency converter can be mounted side-by-side for IP20 rating units and requires 100 mm clearance above and below for cooling. Refer to *chapter 1.7 Specifications* for details on environmental ratings of the frequency converter.

1.3.2 Mechanical Dimensions

A template for drilling is found on the flap of the packaging.

| | | Power [kW] | | Height [mm] | | | Height [mm] Width [mm] | | | Height [mm] Width [mm] Depth | | Depth ¹⁾ [mm] | Maximum weight |
|-----------|-------------|-------------|-------------|-------------|--------------------------------|-------|------------------------|-----|-----|------------------------------|--|--------------------------|-------------------|

Illustration 1.1 Mechanical Dimensions

NOTICE

All cabling must comply with national and local regulations on cable cross-sections and ambient temperature. Copper conductors required, (60–75 °C) recommended.

| | | Power [kW] | | Torque [Nm] | | | | | |
|--------------|----------------|---------------|-------------|-------------|-------|---------------------|-------------------|--------|-------|

Table 1.2 Tightening of Terminals

Branch circuit protection

To protect the installation against electrical and fire hazards, all branch circuits in an installation, switch gear, machines and so on, must be short-circuited and overcurrent protected according to national/international regulations.

Short circuit protection

Use the fuses mentioned in *Table 1.3* to protect service personnel or other equipment in case of an internal failure in the unit or short circuit on DC-link. The frequency converter provides full short circuit protection in case of a short circuit on the motor or brake output.

Overcurrent protection

Provide overload protection to avoid overheating of the cables in the installation. Always carry out overcurrent protection according to national regulations. Fuses must be designed for protection in a circuit capable of supplying a maximum of 100000 A_{rms} (symmetrical), 480 V maximum.

Non-UL compliance

If UL/cUL is not to be complied with, use the fuses mentioned in *Table 1.3*, which ensure compliance with EN50178/IEC61800-5-1:

In case of malfunction, not following the fuse recommendation may result in damage to the frequency converter and the installation.

| FC 54 | | Maximum fuses UL | | | | | | | | |

1.3.3 Connecting to Mains and Motor

The frequency converter is designed to operate all standard 3-phased asynchronous motors.

The frequency converter is designed to accept mains/ motor cables with a maximum cross-section of 4 mm²/10 AWG (M1, M2 and M3), and a maximum cross-section of 16 mm²/6 AWG (M4 and M5).

- Use a shielded/armoured motor cable to comply with EMC emission specifications, and connect this cable to both the decoupling plate and the motor metal.
- Keep motor cable as short as possible to reduce the noise level and leakage currents.
- For further details on mounting of the decoupling plate, see VLT® Micro Drive FC 51 Decoupling Mounting Plate Instructions.
- Also see the chapter EMC-correct Electrical Installation in the VLT® Micro Drive FC 51 Design Guide.
- 1. Mount the ground wires to PE terminal.
- 2. Connect motor to terminals U, V, and W.
- 3. Mount mains supply to terminals L1/L, L2, and L3/N (3-phase) or L1/L and L3/N (single-phase) and tighten.

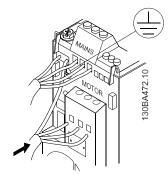

Illustration 1.2 Mounting of Ground Cable, Mains, and Motor Wires

1.3.4 Control Terminals

All control cable terminals are located underneath the terminal cover in front of the frequency converter. Remove the terminal cover using a screwdriver.

NOTICE

See the back of the terminal cover for outlines of control terminals and switches.

Do not operate switches with power on the frequency converter.

Set 6-19 Terminal 53 Mode according to Switch 4 position.

1.3.5 Power Circuit - Overview

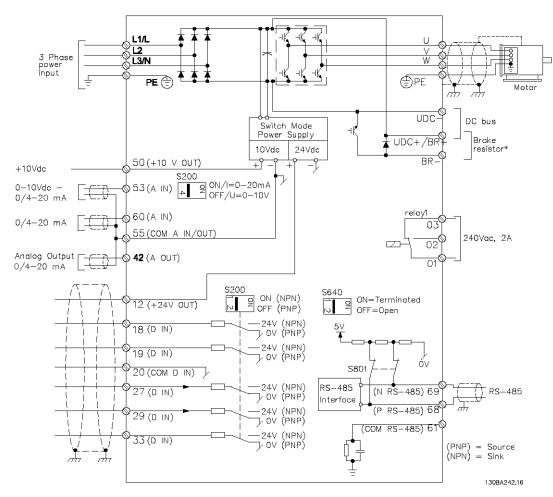

Illustration 1.6 Diagram Showing all Electrical Terminals

Brake resistors are available from Danfoss.

Improved power factor and EMC performance can be achieved by installing optional Danfoss line filters. Danfoss power filters can also be used for load sharing.

^{*} Brakes (BR+ and BR-) are not applicable for enclosure type M1.

1.3.6 Load Sharing/Brake

Use 6.3 mm insulated Faston plugs designed for high voltage for DC (load sharing and brake).

Contact Danfoss or see *Load sharing instruction VLT® 5000* for load sharing and *VLT® 2800/5000/5000 FLUX/FCD 300 Brake* for brake.

Load sharing

Connect terminals -UDC and +UDC/+BR.

Brake

Connect terminals -BR and +UDC/+BR (not applicable for enclosure size M1).

NOTICE

Voltage levels of up to 850 V DC may occur between terminals +UDC/+BR and -UDC. Not short circuit protected.

1.4 Programming

1.4.1 Programming on Automatic Motor Adaptation (AMA)

For detailed information on programming, see VLT® Micro Drive FC 51 Programming Guide.

NOTICE

The frequency converter can also be programmed from a PC via RS485 com-port by installing the MCT 10 Set-up Software.

This software can either be ordered using code number 130B1000 or downloaded from the Danfoss web site: www.danfoss.com/BusinessAreas/DrivesSolutions/software-download

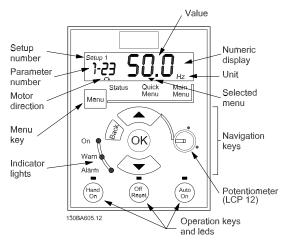

Illustration 1.7 Description of LCP Keys and Display

Press [Menu] to select 1 of the following menus:

Status

For readouts only.

Ouick Menu

For access to Quick Menus 1 and 2.

Main Menu

For access to all parameters.

Navigation keys

[Back]: For moving to the previous step or layer in the navigation structure.

[▲] [▼]: For manoeuvring between parameter groups, parameters and within parameters.

[OK]: For selecting a parameter and for accepting changes to parameter settings.

Pressing [OK] for more than 1 s enters *Adjust* mode. In *Adjust* mode, it is possible to make fast adjustment by pressing $[\blacktriangle]$ [\blacktriangledown] combined with [OK].

Press [A] [V] to change value. Press [OK] to shift between digits quickly.

To exit *Adjust* mode, press [OK] more than 1 s again with changes saving or press [Back] without changes saving.

Operation keys

A yellow indicator light above the operation keys indicates the active key.

[Hand On]: Starts the motor and enables control of the frequency converter via the LCP.

[Off/Reset]: The motor stops. If in alarm mode, the motor resets.

[Auto On]: The frequency converter is controlled either via control terminals or serial communication.

[Potentiometer] (LCP12): The potentiometer works in 2 ways depending on the mode in which the frequency converter is running.

In *Auto On* mode, the potentiometer acts as an extra programmable analog input.

In *Hand On* mode, the potentiometer controls local reference.

1.4.2 Programming on Automatic Motor Tuning (AMT)

Run AMT to optimise compatibility between the frequency converter and the motor in VVC+ mode.

- The frequency converter builds a mathematical model of the motor for regulating output motor current thus enhancing motor performance.
- Run this procedure on a cold motor for best results. To run AMT, use the numeric LCP (NLCP).
 There are 2 AMT modes for frequency converters.

Mode 1

- 1. Enter the main menu.
- 2. Go to parameter group 1-** Load and Motor.
- 3. Press [OK].
- 4. Set motor parameters using nameplate data for parameter group 1-2* Motor Data.
- 5. Go to 1-29 Automatic Motor Tuning (AMT).
- 6. Press [OK].
- 7. Select [2] Enable AMT.

- 8. Press [OK].
- 9. The test runs automatically and indicates when it is complete.

Mode 2

- 1. Enter the main menu.
- 2. Go to parameter group 1-** Load and Motor.
- 3. Press [OK].
- 4. Set motor parameters using nameplate data for parameter group 1-2* Motor Data.
- 5. Go to 1-29 Automatic Motor Tuning (AMT).
- 6. Press [OK].
- 7. Select [3] Complete AMT with Rotating motor.
- 8. Press [OK].
- 9. The test runs automatically and indicates when it is complete.

NOTICE

In mode 2, the rotor rotates during the AMT progress. Do not add any load on motor in this AMT progress.

1.6 Troubleshooting

1.6.1 Warnings and Alarms

| Number | Description | Warning | Alarm | Trip Lock | Error | Cause of problem |
|--------|--|---------|-------|--------------|-------|---|
| 2 | Live zero error | Х | Х | | | Signal on terminal 53 or 60 is less than 50% of the value set in: • 6-10 Terminal 53 Low Voltage • 6-12 Terminal 53 Low Current • 6-22 Terminal 54 Low Current |
| 4 | Mains phase loss ¹⁾ | Х | Х | Х | | Missing phase on supply side, or too high voltage imbalance. Check supply voltage. |
| 7 | DC over voltage ¹⁾ | Х | Х | | | DC-link voltage exceeds the limit. |
| 8 | DC under voltage ¹⁾ | Х | Х | | | DC-link voltage drops below the voltage warning limit. |
| 9 | Inverter overloaded | Х | Х | | | More than 100% load for too long. |
| 10 | Motor ETR overtemperature | Х | Х | | | Motor is too hot. The load has exceeded 100% for too long. |
| 11 | Motor thermistor overtem- perature | Х | Х | | | Thermistor or thermistor connection is disconnected. |
| 12 | Torque limit | Х | | | | Torque exceeds value set in either parameter 4-16 Torque Limit Motor Mode or 4-17Torque Limit Generator Mode. |
| 13 | Overcurrent | Х | Х | Х | | Inverter peak current limit is exceeded. |
| 14 | Ground fault | Х | Х | Х | | Discharge from output phases to ground. |
| 16 | Short Circuit | | Х | Х | | Short circuit in motor or on motor terminals. |
| 17 | Control word time-out | Х | Х | | | No communication to frequency converter. |
| 25 | Brake resistor short-circuited | | Х | Х | | Brake resistor is short-circuited, thus the brake function is disconnected. |
| 27 | Brake chopper short-circuited | | Х | Х | | Brake transistor is short-circuited, thus the brake function is disconnected. |
| 28 | Brake check | | Х | | | Brake resistor is not connected/working. |
| 29 | Power board over temp | Х | Х | Х | | Heat sink cut-out temperature has been reached. |
| 30 | Motor phase U missing | | Х | Х | | Motor phase U is missing. Check the phase. |
| 31 | Motor phase V missing | | Χ | Х | | Motor phase V is missing. Check the phase. |
| 32 | Motor phase W missing | | Х | Х | | Motor phase W is missing. Check the phase. |
| 38 | Internal fault | | Χ | Х | | Contact local Danfoss supplier. |
| 44 | Ground fault | | Χ | Х | | Discharge from output phases to ground. |
| 47 | Control Voltage Fault | | Χ | Х | | 24 V DC is overloaded. |
| 51 | AMA check Unom and Inom | | Χ | | | Wrong setting for motor voltage and/or motor current. |
| 52 | AMA low I _{nom} | | Χ | | | Motor current is too low. Check settings. |
| 59 | Current limit | Х | | | | Frequency converter overload. |
| 63 | Mechanical Brake Low | | Х | | | Actual motor current has not exceeded the release brake- current within the start delay-time window. |
| 80 | Frequency Converter Initialised to Default Value | | Х | | | All parameter settings are initialised to default settings. |
| 84 | The connection between frequency converter and LCP is lost | | | | Х | No communication between LCP and frequency converter. |
| 85 | Key disabled | | | | Х | See parameter group 0-4* LCP. |
| 86 | Copy fail | | | | Х | An error occurred while copying from frequency converter to LCP, or from LCP to frequency converter. |
| 87 | LCP data invalid | | | | Х | Occurs when copying from LCP if the LCP contains erroneous data - or if no data was uploaded to the LCP. |

Quick Guide Quick Guide

| 88 | LCP data not compatible | Х | Occurs when copying from LCP if data are moved between |
|--------|---------------------------------|---|--|
| | | | frequency converters with major differences in software |
| | | | versions. |
| 89 | Parameter read only | X | Occurs when trying to write to a read-only parameter. |
| 90 | Parameter database busy | X | LCP and RS485 connection are trying to update parameters |
| | | | simultaneously. |
| 91 | Parameter value is not valid in | X | Occurs when trying to write an illegal value to a parameter. |
| | this mode | | |
| 92 | Parameter value exceeds the | X | Occurs when trying to set a value outside the range. |
| | min/max limits | | |
| nw run | Not While Runnin | X | Parameters can only be changed when the motor is stopped. |
| Err. | A wrong password was | Х | Occurs when using a wrong password for changing a |
| | entered | | password-protected parameter. |

Table 1.9 Mains Supply 3x380-480 V AC

¹⁾ Applies for dimensioning of frequency converter cooling. If the switching frequency is higher than the default setting, the power losses may increase. LCP and typical control card power consumptions are included. For power loss data according to EN 50598-2, refer to www.danfoss.com/vltenergyefficiency.

²⁾ Efficiency measured at nominal current. For energy efficiency class, see chapter 1.8.2 Surroundings. For part load losses, see www.danfoss.com/vltenergyefficiency.

1

1.8 General Technical Data

1.8.1 Protection and Features

- Electronic motor thermal protection against overload.
- Temperature monitoring of the heat sink ensures that the frequency converter trips in case of overtemperature.
- The frequency converter is protected against short circuits between motor terminals U, V, W.
- When a motor phase is missing, the frequency converter trips and issues an alarm.
- When a mains phase is missing, the frequency converter trips or issues a warning (depending on the load).
- Monitoring of the DC-link voltage ensures that the frequency converter trips when the DC-link voltage is too low or too high.
- The frequency converter is protected against ground faults on motor terminals U, V, W.

| Mains supply (L1/L, L2, L3/N) | |
|--|---|
| Supply voltage | 200-240 V ±10% |
| Supply voltage | 380-480 V ±10% |
| Supply frequency | 50/60 Hz |
| Maximum imbalance temporary between mains phases | 3.0% of rated supply voltage |
| True power factor | ≥0.4 nominal at rated load |
| Displacement power factor (cosφ) near unity | (>0.98) |
| Switching on input supply L1/L, L2, L3/N (power-ups) | Maximum 2 times/minute |
| Environment according to EN60664-1 | Overvoltage category III/pollution degree 2 |

The unit is suitable for use on a circuit capable of delivering not more than 100000 RMS symmetrical Amperes, 240/480 V maximum.

| Motor | out | out (| U. | V. | W) |
|-------|-----|-------|----|----|----|
| | | | | | |

| Output voltage | 0–100% of supply voltage |
|--|---------------------------------|
| Output frequency | 0-200 Hz (VVC+), 0-400 Hz (u/f) |
| Switching on output | Unlimited |
| Ramp times | 0.05–3600 s |
| Cable length and cross-section | |
| Maximum motor cable length, screened/armoured (EMC-correct installation) | 15 m |
| Maximum motor cable length, unscreened/unarmoured | 50 m |
| Maximum cross-section to motor, mains ¹⁾ | |
| Connection to load sharing/brake (M1, M2, M3) | 6.3 mm insulated Faston plugs |
| Maximum cross-section to load sharing/brake (M4, M5) | 16 mm²/6 AWG |
| Maximum cross-section to control terminals, rigid wire | 1.5 mm²/16 AWG (2x0.75 mm²) |
| Maximum cross-section to control terminals, flexible cable | 1 mm²/18 AWG |
| Maximum cross-section to control terminals, cable with enclosed core | 0.5 mm ² /20 AWG |
| Minimum cross-section to control terminals | 0.25 mm ² |

¹⁾ See chapter 1.7 Specifications for more information.

- 1) Refer to chapter 1.9 Special Conditions for:
 - Derating for high ambient temperature.
 - Derating for high altitude.
- 2) Determined according to EN50598-2 at:
 - Rated load.
 - 90% rated frequency.
 - Switching frequency factory setting.
 - Switching pattern factory setting.

1.9 Special Conditions

1.9.1 Derating for Ambient Temperature

The ambient temperature measured over 24 hours should be at least 5 °C lower than the maximum ambient temperature.

If the frequency converter is operated at high ambient temperature, decrease the continuous output current.

The frequency converter has been designed for operation at maximum 50 °C ambient temperature with 1 motor size smaller than nominal. Continuous operation at full load at 50 °C ambient temperature reduces the lifetime of the frequency converter.

1.9.2 Derating for Low Air Pressure

The cooling capability of air is decreased at low air pressure.

For altitudes above 2000 m, contact Danfoss regarding PELV.

Below 1000 m altitude, no derating is necessary, but above 1000 m, decrease the ambient temperature or the maximum output current.

Decrease the output by 1% per 100 m altitude above 1000 m, or reduce the maximum ambient temperature by 1 $^{\circ}\text{C}$ per 200 m.

1.9.3 Derating for Running at Low Speeds

When a motor is connected to a frequency converter, check that the cooling of the motor is adequate.

A problem may occur at low speeds in constant torque applications. Running continuously at low speeds – less than half the nominal motor speed – may require extra air cooling. Alternatively, select a larger motor (1 size up).

1.10 Options and Spare Parts

| Ordering number | Description |
|-----------------|---|
| 132B0100 | VLT Control Panel LCP 11 w/o potentiometer |
| 132B0101 | VLT Control Panel LCP 12 with potentiometer |
| 132B0102 | LCP Remote Mounting Kit , w/ 3m cable, IP55 with LCP 11, IP21 with LCP 12 |
| 132B0103 | IP20 to NEMA Type 1 Conversion Kit, M1 |
| 132B0104 | IP20 to NEMA Type 1 Conversion Kit, M2 |
| 132B0105 | IP20 to NEMA Type 1 Conversion Kit, M3 |
| 132B0106 | Decoupling Plate mounting kit, M1 and M2 |
| 132B0107 | Decoupling Plate mounting kit, M3 |
| 132B0108 | IP20 to IP21/Type1 conversion kit, M1 |
